TRANSLATION OF AUDITORS' REPORT ORIGINALLY ISSUED IN ARABIC

AUDITORS' REPORT

To the Shareholders of Societe Arabe Internationale de Banque (SAIB) - S.A.E.

Report on the Financial Statements

We have audited the accompanying financial statements of Societe Arabe Internationale de Banque (SAIB) S.A.E. which compromises the balance sheet as of December 31, 2014, and the statements of income, cash flows and changes in equity for the financial year then ended, and a summary of significant accounting policies and other explanatory notes.

Management's Responsibility for the Financial Statements

These financial statements are the responsibility of the bank's management. Management is responsible for the preparation and fair presentation of these financial statements in accordance with Central Bank of Egypt's rules according to rules of the preparation and presentation of the financial statements and measurement and recognition bases approved by its board of directors on December 16, 2008 and in view of prevailing Egyptian laws, management's responsibility includes designing, implementing and maintaining internal control relevant to the preparation and fair presentation of the financial statements that are free from material misstatement, whether due to fraud or error, management responsibility also includes selecting and applying the appropriate accounting policies, and performing the accounting estimates that are reasonable to the circumstances.

Auditor's Responsibility

Our responsibility is to express an opinion on the financial statements based on our audit. We conducted our audit in accordance with Egyptian Standards of Auditing and in the light of prevailing Egyptian laws. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit process involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate with circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control, the audit process also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the financial statements.

Opinion

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of **Societe Arabe Internationale de Banque (SAIB) - S.A.E.** as of December 31, 2014, and of its financial performance, and its cash flows for the year then ended in accordance with Central Bank of Egypt's rules, according to the rules of the preparation and presentation of the financial statements and measurement and recognition bases approved by its boards of directors on December 16, 2008 and the Egyptian laws and regulations relating to the preparation of these financial statements.

Report on Legal and other Regulatory Requirements

The bank maintains proper books of account, which includes all that is required by law and by the statutes of the bank; the financial statements are in agreement thereto.

According to the information and explanations given to us during the financial year ended December 31, 2014 no contravention of the central bank, banking and monetary institution law No.88 of 2003.

The financial information included in the Board of Directors' report, prepared in accordance with Law No. 159 of 1981 and its executive regulations, is in agreement with the Bank's books of account.

TRANSLATION OF NOTES TO THE FINANCIAL STATEMENTS ORIGINALLY ISSUED IN ARABIC

NOTES TO THE FINANCIAL STATEMENTS FOR THE YEAR ENDED DECEMBER 31, 2014

1. GENERAL INFORMATION

Societe Arabe Internationale de Banque (SAIB) provides retail, corporate banking and investment banking services in Egypt through 25 branches and employs 1033 people in the balance sheet date.

The bank was established in accordance with Law No. 43 for 1974 and the Head office is located in 56 Gamaet El Dewal El Arabeya St, Giza. The Bank is listing on the Cairo & Alex stock exchange.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES APPLIED

The principal accounting policies applied in the preparation of these financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

a. Basis for Preparation of Financial Statements

The financial statements were prepared in accordance with the Egyptian Accounting Standards issued in 2006 and its amendments in accordance with the instructions of the Central Bank of Egypt approved by the Board of Directors as of December 16, 2008 consistent with the standards referred to, and on the basis of historical cost as modified by the revaluation of financial assets and liabilities held for trading and the financial assets and liabilities at fair value through profit or loss and the financial investments available for sale.

b. Associates companies

Associates are all entities over which the Bank has direct or indirect significant influence but not control, generally accompanying a shareholding of between 20% and 50% of the voting rights.

The purchase method is used for the accounting of the acquisitions of the companies by the Bank. The acquisition cost is measured at fair value, or the assets offered by the bank as return for purchase and/or the tools of property rights issued and/or obligations incurred by the Bank and/or the obligations accepted on behalf of the company acquired at the date of exchange, plus any costs directly attributable to the acquisition process. The net assets are measured, including contingent liabilities identifiable acquired by fair value at the date of acquisition.

The investments are evaluated in the associates company, by the financial statements of the bank according to the equity method under which the investment in any company is proven initially in any associates company by the cost then the balance of the investment increases or decreases to prove the Bank's share of profits or losses of the company invested in after the acquisition company. That share is proven under the note "Profit or loss of investments in associates companies" in the income statement during the preparation of the financial statements. The balance of the investment is decreased by the value of dividends gained from the company invested in.

c. Segment reporting

A business segment is a group of assets and operations engaged in providing products or services that are subject to risks and returns that are different from those of other business segments. A geographical segment is engaged in providing products or services within a particular economic environment that are subject to risks and returns different from those of segments operating in other economic environments.

d. Foreign currency translation

d-1 Functional and presentation foreign currency

Transactions are recorded during the year in their original currency. For reporting the financial statements of the bank in US Dollars, at the end of each fiscal period, all assets, liabilities, shareholders' equity and expenses and revenues recorded in a currency other than the US Dollar (except those recorded in Egyptian pounds), are translated to US Dollars using stated exchange rates at that date. Balances shown in Egyptian pounds are translated to US Dollars using the official exchange rates of the central bank of Egypt. This translation has no effect on the income statement.

e. Financial assets

The Bank classifies its financial assets in the following categories: financial assets at fair value through profit or loss; loans and advances; held-to-maturity investments; and available-for-sale financial assets. Management determines the classification of its investments at the initial recognition.

e-1 Financial assets at fair value through profit or loss

- This category has two sub-categories: financial assets held for trading, and those designated at fair value through profit or loss at inception.
- A financial asset is classified as held for trading if it is acquired or incurred principally for the purpose of selling or repurchasing in the near term or if it is part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of shortterm profit taking.
- Financial assets are classified at fair value through profit or loss when:
- Doing so significantly reduces measurement inconsistencies that would arise if the related derivatives were treated as held for trading and the underlying financial instruments were carried at amortized cost for loans and advances to customers or banks and debt securities in issue.

Financial Statements for the year ended December 31, 2014

- Certain investments, such as equity investments, are managed and evaluated on a fair value basis in accordance with a documented risk management or investment strategy and reported to key management personnel on that basis are designated at fair value through profit and loss.
- Financial instruments, such as debt securities held, containing one or more embedded derivatives significantly modify the cash flows, and they are designated at fair value through profit and loss.
- Profits and losses arising from changes in fair value of financial derivatives, which are managed in conjunction with the assets or financial liabilities classified at fair value through profit and loss and that in the income statement "item Net income from financial instruments classified at fair value when recognition through profit and loss".
- Any financial derivative of a valued financial instruments at fair value is not reclassified Through profit and loss during the retention period. It also does not re-classify any financial instrument, quoting from a range of financial instruments at fair value Through profit and loss if this tool has been customized by the bank at initial recognition As assessed at fair value through profit and loss.
- According to the financial assets which are reclassified in the periods that begin form first of January 2009 it is reclassified according to the fair value in the date of reclassification.
- Bank in all conditions does not reclassify any financial instrument moving to groups of financial instruments reclassified with fair value from profit and loss or to financial assets groups for trading.

e-2 Loans and advances

Loans and advances are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market, other than:

- Those that the bank intends to sell immediately or in the short term, which is classified as held for trading, or those that the bank upon initial recognition designates at fair value through profit or loss.
- Those that the bank upon initial recognition designates as available for sale.
- Those for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration.

e-3 Held to maturity financial assets

Held-to-maturity investments are non-derivative financial assets with fixed or determinable payments and fixed maturities that the Bank's management has the positive intention and ability to hold to maturity. If the Bank were to sell other than an insignificant amount of held to-maturity assets, the entire category would be reclassified as available for sale except for force-majority circumstances

Financial Statements for the year ended December 31, 2014

e-4 Available for sale financial assets

Available-for-sale investments are those non-derivative financial assets intended to be held for an indefinite period of time, which may be sold in response to needs for liquidity or changes in interest rates, exchange rates or equity prices.

The following are applied in respect of all financial assets.

- Regular-way purchases and sales of financial assets at fair value through profit or loss, held to maturity and available for sale are recognized on trade-date the date on which the Bank commits to purchase or sell the asset.
- Financial assets are initially recognized at fair value plus transaction costs for all financial assets not carried at fair value through profit or loss. Financial assets carried at fair value through profit and loss are initially recognized at fair value, and transaction costs are expensed in the income statement.
- Financial assets are derecognized when the rights to receive cash flows from the financial assets have expired or where the Bank has transferred substantially all risks and rewards of ownership. Financial liabilities are derecognized when they are extinguished that is, when the obligation is discharged, cancelled or expires.
- Available-for-sale financial assets and financial assets at fair value through profit or loss are subsequently carried at fair value. Loans and advances and held-to-maturity investments are carried at amortized cost.
- Gains and losses arising from changes in the fair value of the 'financial assets at fair value through profit or loss' category are included in the income statement in the period in which they arise. Gains and losses arising from changes in the fair value of available-for-sale financial assets are recognized directly in equity, until the financial asset is derecognized or impaired. At this time, the cumulative gain or loss previously recognized in equity is recognized in profit or loss.
- Interest calculated using the effective interest method and foreign currency gains and losses on monetary assets classified as available for sale are recognized in the income statement. Dividends on available-for-sale equity instruments are recognized in the income statement when the bank's right to receive payment is established.
- The fair values of quoted investments in active markets are based on current bid prices. If there is no active market for a financial asset or bid prices is unavailable, the Bank establishes fair value using valuation techniques. These include the use of recent arm's length transactions, discounted cash flow analysis, option pricing models and other valuation techniques commonly used by market participants. If the bank could not assess the value of the equity classified as available for sale, these instruments should be valued at cost and will be subjected to impairment test.

- The Bank reclassify the financial asset tabbed within the range of financial instruments available for sale, which left the definition of loans and debts (bonds or loans), quoting a set of tools available for sale to the group of loans and advances or financial assets held to maturity all as the case when available Bank has the intent and ability to hold these financial assets in the foreseeable future or until maturity and are re-tab at fair value in the history of re-tab, and not process any profits or losses on those assets that have been recognized previously in equity and in the following manner:
 - 1- In case of financial asset reclassified, which has a fixed maturity are amortized gains or losses over the remaining life of the investment retained until the maturity date in a manner effective yield is consumed any difference between the value on the basis of amortized cost and value on an accrual basis over the remaining life of the financial asset using the effective yield method, and in the case of the decay of the value of the financial asset is a later recognition of any gain or loss previously recognized directly in equity in the profits and losses.
 - 2- in the case of financial asset which has no fixed maturity continue to profit or loss in equity until the sale of the asset or to dispose of it, then be recognized in the profit and loss In the case of erosion of the value of the financial asset is a later recognition of any gain or loss previously recognized directly within equity in the profits and losses.
- If the Bank to adjust its estimates of actual payments or receipts and amended estimates of the financial asset (or group of financial assets) to reflect the actual cash inflows and the adjusted estimates to be recalculated book value and then calculates the present value of estimated future cash flows at the effective yield of the financial instrument then it is recognized as income or expense in the profit and loss.
- In all cases, if the bank re-Tab financial asset in accordance with what is referred to The Bank at a later date to increase its estimate of the proceeds of future cash result of the increase will be recovered from the cash receipts, is the recognition of the impact of this increase in settlement of the interest rate effective from the date of change in the estimate and not in settlement of the balance of the original notebook in the history of change in the estimate.

f. Offsetting financial instruments

- Financial assets and liabilities are offset and the not amount reported in the balance sheet when there is a legally enforceable right to offset the recognized amounts and there is an intention to settle on a net basis, or realize the asset and settle the liability simultaneously.
- The agreements to buy treasury bills with a commitment to re-sale and agreements to sale treasury bills with a commitment to re-purchase on a net basis within the balance sheet included in treasury bills and other eligible bills.

Financial Statements for the year ended December 31, 2014

g. Interest income and expense

Interest income and expense for all interest-bearing financial instruments, except for those classified as held for trading or designated at fair value through profit or loss, are recognized within 'interest income' and 'interest expense' in the income statement using the effective interest method.

The effective interest method is a method of calculating the amortized cost of a financial asset or a financial liability and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Bank estimates cash flows considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, transaction costs and all other premiums or discounts.

When loans or debts are classified as non-performing or impaired ,related interest income are not recognized but rather ,are carried off balance sheet in statistical records and are recognized under revenues according to cash basis as per the following:

- 1- When it is collected and this is after redeeming all dues of consumer loans and personnel mortgages also small loans for economic activities
- 2- For loans given to institutions it is related to the monetary base also, it raises the return after that, according to rescheduling conditions on the loan till paying 25% from rescheduling payments with a minimum one year without being late, if the customer is always paying at his due dates the interest calculated is added to the loan balance which makes revenues (interest on rescheduling without deficits) without interests aside before rescheduling which is avoiding revenues except after paying all the loan balance in the balance sheet before rescheduling.

h. Fee and commission income

Fees and commissions are generally recognized on an accrual basis when the service has been provided. Loan commitment fees for loans that are likely to be drawn down are deferred (together with related direct costs) Where it is recorded in the records of marginal outside the financial statements, And are recognized as income in accordance with cash basis Income is recognized when revenue for fees note no (2-g) that represent an integral part of the effective yield of the financial asset are generally treated as an amendment to the actual rate of return.

And postponement of fees is the link on the loans if there is a possibility that he will likely be the withdrawal of such loans and the fees on the grounds that the link obtained by the Bank are considered compensation for the constant intervention for the acquisition of a financial instrument, Then be recognized by the amend the effective interest rate on the loan In the case of the end of the link without issuing bank for the loan fees are recognized as income at the end of the period of validity of the link.

Fees are recognized on the debt instruments that are measured at fair value within the income on initial recognition& Loan syndication fees are recognized as revenue when the syndication has been completed and the Bank has retained no part of the loan package for itself or has retained a part at the same effective interest rate as the other participants. Commission and fees arising from negotiating, or participating in the negotiation of, a transaction for a third party – such as the arrangement of the acquisition of shares or other securities or the purchase or sale of businesses – are recognized on completion of the underlying transaction.

Portfolio and other management advisory and service fees are recognized based on the applicable service contracts, usually on a time- apportionate basis. Asset management fees related to investment funds are recognized ratably over the period in which the service is provided. The same principle is applied for wealth management, financial planning and custody services that are continuously provided over an extended period of time. Performance linked fees or fee components are recognized when the performance criteria are fulfilled.

i. Dividend income

Dividends are recognized in the income statement when the bank's right to receive dividend is established.

j. <u>Purchase and resale agreements and sale and repurchase agreements (repos and reverse repos)</u>

Financial instruments are sold under agreements to repurchase it within the assets added to the balances of the Treasury bills and other governmental papers in the balance sheet. The liability is displayed (purchase agreements and resale) deducted from the balances of the Treasury bills and other governmental papers in the balance sheet. The difference between the sale price and the repurchase price is recognized as income to be accrued throughout the duration of the agreements by using the actual rate of return method.

k. Impairment of financial assets

k-1 Financial assets carried at amortized cost

The Bank assesses at each balance sheet date whether there is objective evidence that a financial asset or group of financial assets is impaired. A financial asset or a group of financial assets is impaired and impairment losses are incurred only if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset (a 'loss event') and that loss event (or events) has an impact on the estimated future cash flows of the financial asset or group of financial assets that can be reliably estimated.

The criteria that the Bank uses to determine that there is objective evidence of an impairment loss include:

- Great financial troubles facing the borrower or debtor.
- Breach of contract such as a default or delinquency in interest or principal payments.
- Expected bankruptcy of borrower or upon being subject to liquidation lawsuit or to re-structuring the finance granted to it.
- Deterioration of competitive position of borrower.

- Granting privilege or assignments by the bank to the borrower, due to economic or legal reasons related to the financial troubles, which are not granted by the bank in the normal course of business.
- Impairment of guarantee
- Deterioration of creditworthiness.
- A substantive evidence for impairment loss of the financial assets is the existence of clear information indicating a measurable decline in the expected future cash flows of such category since initial recognition though such decline is not identifiable for each individual asset.
- The bank estimates the period between the loss event and identifying thereof for each specific portfolio. In general, the period used vary between three months and 12 months.
- The Bank first assesses whether objective evidence of impairment exists individually for financial assets that are individually significant, and individually or collectively for financial assets that are not individually significant. Taking into account the following:
 - If the Bank determines that no objective evidence of impairment exists for an individually assessed financial asset, whether significant or not, it includes the asset in a group of financial assets with similar credit risk characteristics and collectively assesses them for impairment based on historical loss rates.
 - Assets that are individually assessed for impairment and for which an impairment loss is continues to be recognized are not included in a collective assessment of impairment.
 - If the previous assessment resulted in the absence of impairment loss then the assets is included into the group.
 - The amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset is reduced through the use of an allowance account and the amount of the loss is recognized in the income statement.
 - If a loan or held-to-maturity investment has a variable interest rate, the discount rate for measuring any impairment loss is the current effective interest rate determined under the contract. As a practical expedient, the Bank may measure impairment on the basis of an instrument's fair value using an observable market price. The calculation of the present value of the estimated future cash flows of a collateralized financial asset reflects the cash flows that may result from foreclosure less costs for obtaining and selling the collateral, whether or not foreclosure is probable.

For the purposes of a collective evaluation of impairment, financial assets are grouped on the basis of similar credit risk characteristics (i.e., on the basis of the Group's grading process that considers asset type, industry, geographical location, collateral type, past-due status and other relevant factors). Those characteristics are relevant to the estimation of future cash flows for groups of such assets by being indicative of the debtors' ability to pay all amounts due according to the contractual terms of the assets being evaluated.

Future cash flows in a group of financial assets that are collectively evaluated for impairment are estimated on the basis of the contractual cash flows of the assets in the Bank and historical loss experience for assets with credit risk characteristics similar to those in the Bank. Historical loss experience is adjusted on the basis of current observable data to reflect the effects of current conditions that did not affect the period on which the historical loss experience is based and to remove the effects of conditions in the historical period that do not currently exist.

Estimates of changes in future cash flows for groups of assets should reflect and be directionally consistent with changes in related observable data from period to period (for example, changes in unemployment rates, property prices, payment status, or other factors indicative of changes in the probability of losses in the Bank and their magnitude). The methodology and assumptions used for estimating future cash flows are reviewed regularly by the Bank to reduce any differences between loss estimates and actual loss experience.

k-2 Available for sale financial assets

The Bank assesses at each balance sheet date whether there is objective evidence that a financial asset or a group of financial assets is impaired. In the case of equity investments classified as available for sale, a significant or prolonged decline in the fair value of the security below its cost is considered in determining whether the assets are impaired.

During the period starting from January 1, 2009 for listed equity instruments the need to book impairment is analyzed as soon as a significant and prolonged decline of their price below their acquisition cost is observed. The decline in value is considered significant for the equity instruments if it reaches 10% of the financial instrument's cost, and it is considered prolonged if it extended for a period of more than 9 months. Impairment losses recognized in the income statement on equity instruments are not reversed through the income statement. If, in a subsequent period, the fair value of a debt instrument classified as available for sale increases and the increase can be objectively related to an event occurring after the impairment loss was recognized in profit or loss, the impairment loss is reversed through the income statement.

I. <u>Intangible assets</u>

I-1 Goodwill

Goodwill represents the difference between the cost of the combination and the acquirer's interest in the fair value of the identifiable assets, liabilities and contingent liabilities of the acquiree at the acquisition date. The extent of goodwill impairment is to be annually checked, while goodwill amortization of 20% or impairment amount, whichever is bigger, is to be charged to income. Goodwill relevant to either subsidiary or sister companies is to be considered in determining profit / loss on the sale of such companies (note 2/b).

Goodwill is to be distributed on monetary generating funds' units for impairment test purpose; such units represent the main bank's segments (note 2/c).

1-2 Software (computer programs)

The expenses, related to upgrading or maintenance of computer programs, are to be recognized as expenses in income statement, upon being incurred. The expenses related directly with specific software and which are subjected to the bank's control and expected to produce economic benefits exceeding their cost for more than one year, are to be recognized as an intangible asset. The direct expenses include cost of staff in software upgrading teamwork, in addition to a suitable portion of respective overhead expenses.

The expenses which lead to increase or expansion of computer software beyond their original specification are recognized as an upgrading cost and are added to the original software cost.

The computer software cost recognized, as an asset shall be amortized over the period expected useful life not more than 3 years.

1-3 Other intangible assets

The intangible assets other than goodwill and computer programs (for example, trademarks, licenses, benefits of rental contracts). Other intangible assets are stated at the cost of acquisition and depreciated on a straight-line method or on the basis of the economic benefits expected from it, and that over the estimated useful lives, and for assets that do not have a specific useful life, it is not depreciated, it is tested every year for any impairment (if any) it will be recognized on the income statement.

m. Fixed Assets

Land and buildings comprise mainly branches, offices and head offices. All property, plant and equipment is stated at historical cost less depreciation and accumulated impairment losses. Historical cost includes expenditure that is directly attributable to the acquisition of the items.

Subsequent costs are included in the asset's carrying amount or are recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Bank and the cost of the item can be measured reliably. All other repairs and maintenance expenses are charged to other operating expenses during the financial period in which they are incurred.

Land is not depreciated. Depreciation of other assets is calculated using the straight-line method to allocate their cost to their residual values over their estimated useful lives, as follows:

Buildings	20 years
Computers and Core Systems	5 years
Vehicles	5 years
Fixtures and fittings	5 years
Equipments	5 years
Furniture	5 years

The assets' residual values and useful lives are reviewed, and adjusted if appropriate, at each balance sheet date. Assets that are subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount. The recoverable amount is the higher of the asset's fair value less costs to sell and value in use. Gains and losses on disposals are determined by comparing proceeds with carrying amount. These are included in other operating expenses / income in the income statement.

n. Impairment of non-financial assets

Assets that have an indefinite useful life are not subject to amortization (except for goodwill) and are tested annually for impairment. Assets that are subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable.

An impairment loss is recognized for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units). Non-financial assets other than goodwill that suffered impairment are reviewed for possible reversal of the impairment at each financial statement's reporting date.

o. Leases

The accounting treatment for the finance lease in accordance with law 95 of 1995, if the contract entitles the lessee to purchase the asset at a specified date and the value selected, or the current value of the total lease payments representing at least 90% of the value of the asset. The other leases contracts are considered operating leases contracts.

o-1 Being lessee

Finance lease contract recognizes the lease cost, including the cost of maintenance of the leased assets, within the expenses in the income statement for the period in which they occurred. If the bank decided to exercise the rights to purchase the leased assets, the cost of the right to purchase it as an asset are capitalized and amortized over the useful life of the expected remaining life of the asset in the same manner as similar assets.

And recognition of payments under the operating lease expense minus any discounts obtained from the lesser under expenses in the income statement on a straight-line basis over the term of the contract

p. Cash and cash equivalents

For the purposes of the cash flow statement, cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition, including cash and non-restricted balances with central banks, treasury bills and other eligible bills.

q. Other provisions

Provisions for restructuring costs and legal claims are recognized when: the Bank has a present legal or constructive obligation as a result of past events; it is more likely than not that an outflow of resources will be required to settle the obligation; and the amount has been reliably estimated.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognized even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small.

Provisions which negated the purpose of wholly or partly repaid is allocated in the item of other operating income (expense).

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre—tax rate that reflect current market assessment of the time value of money and the risks specific to the obligation the increase in the provision due to passage of time is recognized as expenses.

r. Financial guarantees

The financial collateral contracts are contracts issued by the bank as security for loans or debit current accounts due from its clients to other entities which require the bank to make certain payments for compensating the beneficiary for a loss incurred due to default on the part of the debtor on maturity date, in accordance with conditions of the debt instruments. These financial guarantees are presented to the banks, corporation and other entities on behalf of the bank's clients.

The fair value shall be recognized initially in the financial statements, on date of granting the security. This fair value shall reflect the fee for this security. Consequently the bank's obligation shall be measured by virtue of the guarantee contract on the basis of the first measurement amount less amortization calculated for recognition of security fees in the income statement, according to the straight line method over the guarantee life term, or based on the best estimate for payments required for settlement of any financial obligation resulting from the financial guarantee on date of balance sheet. Whichever is higher. Such estimates are made based on experience in similar transactions and the historical losses as confirmed by management judgment.

Any increase in the obligations resulting from the financial guarantee, shall be recognized within other operating income (expenses) item.

s. Income tax

Income tax on the profit or loss for the year includes each of year tax and deferred tax and is recognized in the income statement except for income tax relating to items of equity that are recognized directly in equity.

Income tax is recognized based on net taxable profit using the tax rates applicable at the date of the budget in addition to tax adjustments for previous years.

Deferred taxes arising from temporary time differences between the book value of assets and liabilities are recognized in accordance with the principles of accounting and value according to the foundations of the tax, this is determining the value of deferred tax on the expected manner to realize or settle the values of assets and liabilities, using tax rates applicable at the date of the budget.

Deferred tax assets of the Bank recognized when there is likely to be possible to achieve profits subject to tax in the future to be possible through to use that asset, and is reducing the value of deferred tax assets with part of that will come from tax benefit expected during the following years, that in the case of expected high benefit tax, deferred tax assets will increase within the limits of the above reduced.

t. Borrowing

Loans, received by the bank, are recognized first by fair value less the cost of obtaining the loan. The loan is later measured by the amortized cost, and the income statement is charged with the difference between the net proceeds and the value that will be met over the period of borrowing using the actual return.

u. <u>Capital</u>

u-1 Capital issuance cost

Expenses directly attributed to the issuance of the new shares. Issuance of shares to effect acquisition, or issuance of shares options are charged to equity net of tax.

u-2 Dividends

Dividends deducted from equity in the period, which the General Assembly of the shareholders acknowledges these distributions. These distributions include the share of workers in the profits and remuneration of the Board of Directors as prescribed by articles of association and law.

u-3 Treasury shares

In case the bank purchase capital's shares, the amount is deducted from the total equity as it represents the cost of treasury shares until it canceled, and in case of sale those shares or re-released in a subsequent period all collections is added to the equity.

v. Fiduciary activities

The bank practices the fiduciary activities that result in ownerships or management of assets on behalf of individuals, trust, and retirement benefit plans and other institution. These assets and income arising thereon are excluded from the bank's financial statements, as they are not assets of the bank.

w. Comparative figures

The comparative figures shall be re-classified, when necessary, to be in conformity with the changes to presentation used in the current year.

Financial Statements for the year ended December 31, 2014

3. Financial risk management

The Bank's activities expose it to a variety of financial risks and those activities involve the analysis, evaluation, acceptance and management of some degree of risk or combination of risks. Taking risk is core to the financial business, and the operational risks are an inevitable consequence of being in business. The Bank's aim is therefore to achieve an appropriate balance between risk and return and minimize potential adverse effects on the Bank's financial performance.

The Bank's risk management policies are designed to identify and analyze these risks, to set appropriate risk limits and controls, and to monitor the risks and adherence to limits by means of reliable and up-to-date information systems. The Bank regularly reviews its risk management policies and systems to reflect changes in markets, products and emerging best practice.

Risk management is carried out by a central treasury department (Bank Treasury) under policies approved by the Board of Directors. Bank Treasury identifies, evaluates and hedges financial risks in close co-operation with the Bank's operating units. The Board provides written principles for overall risk management, as well as written policies covering specific areas, such as foreign exchange risk, interest rate risk, credit risk, use of derivative financial instruments and non-derivative financial instruments. In addition, credit risk management is responsible for the independent review of risk management and the control environment.

a. Credit risk

The Bank takes on exposure to credit risk, which is the risk that counterparty will cause a financial loss for the Bank by failing to discharge an obligation. Management therefore carefully manages its exposure to credit risk. Credit exposures arise principally in loans and advances, debt securities and other bills. There is also credit risk in off-balance sheet financial arrangements such as loan commitments. The credit risk management and control are centralized in a credit risk management team in Bank Treasury and reported to the Board of Directors and head of each business unit regularly.

a-1 Credit risk measurement

- Loans and advances to banks and customers

In measuring credit risk of loan and advances to customers and to banks at a counterparty level, the Bank reflects three components

- The probability of default' by the client or counterparty on its contractual obligations.
- Current exposures to the counterparty and its likely future development, from which the Bank derive the 'exposure at default.
- The likely recovery ratio on the defaulted obligations (the loss given default).

The Bank assesses the probability of default of individual counterparties using internal rating tools tailored to the various categories of counterparty. They have been developed internally and combine statistical analysis with credit officer judgment and are validated, where appropriate, by comparison with externally available data. Clients of the Bank are segmented into four rating classes. The Bank's rating scale, which is shown below, reflects the range of default probabilities defined for each rating class. This means that, in principle, exposures migrate between classes as the assessment of their probability of default changes. The rating tools are kept under review and upgraded as necessary. The Bank regularly validates the performance of the rating and their predictive power with regard to default events.

Bank's internal ratings categories

Bank's rating	Description of the grade
1	Performing loans
2	Regular watching
3	Watch list
4	Non-performing loans

The credit center exposed to failure depend on the amounts which the bank expect to be stand upon the delay, for example, the loans this center is nominal value, for other links, the bank include all the withdrawn amounts in addition to the other amounts that are expected to be drawn till the date of delay. If happened.

Loss given default or loss severity represents the Bank expectation of the extent of loss on a claim should default occur. It is expressed as percentage loss per unit of exposure and typically varies by type of counterparty, type and seniority of claim and availability of collateral or other credit mitigation.

- Debt instruments, Treasury bills and other bills

For debt securities and other bills, external rating such as Standard & Poor's rating or their equivalents are used by bank Treasury for managing of the credit risk exposures. The investments in those securities and bills are viewed as a way to gain a better credit quality mapping and maintain a readily available source to meet the funding requirement at the same time.

a-2 Risk limit control and mitigation policies

The bank manages, limits and controls concentrations of credit risk wherever they are identified – in particular, to individual counterparties and banks, and to industries and countries.

The Bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or groups of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary. Limits on the level of credit risk by individual, group, product, industry sector and by country are approved quarterly by the Board of Directors.

The exposure to any borrower including banks is further restricted by sub-limits covering on- and off-balance sheet exposures, and daily delivery risk limits in relation to trading items such as forward foreign exchange contracts. Actual exposures against limits are monitored and compared daily.

Exposure to credit risk is also managed through regular analysis of the ability of borrowers and potential borrowers to meet interest and capital repayment obligations and by changing these lending limits where appropriate.

Some other specific control and mitigation measures are outlined below.

- Collateral

The bank employs a range of policies and practices to mitigate credit risk. The most traditional of these is the taking of security for funds advances, which is common practice. The bank implements guidelines on the acceptability of specific classes of collateral or credit risk mitigation. The principal collateral types for loans and advances are:

- Mortgages over residential properties.
- Mortgage business assets such as inventory and equipments.
- Mortgage financial instruments such as debt securities and equities.

Longer-term finance and lending to corporate entities are generally secured; revolving individual credit facilities are generally unsecured. In addition, in order to minimize the credit loss the bank will seek additional collateral from the counterparty as soon as impairment indicators are noticed for the relevant individual loans and advances.

Collateral held as security for financial assets other than loans and advances is determined by the nature of the instrument. Debt securities, treasury and other governmental securities are generally unsecured, with the exception of asset-backed securities and similar instruments, which are secured by portfolios of financial instruments.

Credit-related commitments

The primary purpose of these instruments is to ensure that funds are available to a customer as required. Guarantees and standby letters of credit carry the same credit risk as loans. Documentary and commercial letters of credit – which are written undertakings by the Bank on behalf of a customer authorizing a third party to draw drafts on the Bank up to a stipulated amount under specific terms and conditions – are collateralized by the underlying shipments of goods to which they relate and therefore carry less risk than a direct loan.

Commitments to extend credit represent unused portions of authorizations to extend credit in the form of loans, guarantees or letters of credit. With respect to credit risk on commitments to extend credit, the Bank is potentially exposed to loss in an amount equal to the total unused commitments. However, the likely amount of loss is less than the total unused commitments, as most commitments to extend credit are contingent upon customers maintaining specific credit standards. The Bank monitors the term to maturity of credit commitments because longer-term commitments generally have a greater degree of credit risk than short-term commitments.

a-3 Impairment and provisioning policies

The internal systems described in (Notel/a) focus more on credit-quality mapping from the inception of the lending and investment activities. In contrast impairment provisions are recognized for financial reporting purposes only for losses that have been incurred at the balance sheet date based on objective evidence of impairment. The impairment provision shown in the balance sheet at year-end is derived from each of the four internal rating grades. However, the majority of the impairment provision comes from the bottom two grading. The table below shows the percentage of the Bank's on- and off-balance sheet items relating to loans and advances and the associated impairment provision for each of the Bank's internal rating categories:

	<u>31/1</u> ;	<u>2/2014</u>	<u>31/1</u> 2	<u>2/2013</u>
Bank's rating	Loans and advances (%)	Impairment provision (%)	Loans and advances	Impairment provision (%)
1-Performing loans	72.15	30.85	67.07	18.54
2-Reular watching	25.24	9.69	26.62	7.95
3-Watch list	0.34	0.14	2.39	0.70
4-Non performing loans	2.27	59.32	3.92	72.81
	100	100	100	100

The internal rating tool assists management to determine whether objective evidence of impairment exists under EAS 26, based on the following criteria set out by the Bank:

- Great financial troubles facing the borrower or debtor.
- Breach of contract such as a default or delinquency in interest or principal payments.
- Expected bankruptcy of borrower or upon being subject to liquidation lawsuit or to re-structuring the finance granted to it.
- Deterioration of competitive position of borrower.
- Granting privilege or assignments by the bank to the borrower, due to economic or legal reasons related to the financial troubles, which are not granted by the bank in the normal course of business.
- Impairment of guarantee
- Deterioration of creditworthiness.

The Bank's policy requires the review of individual financial assets that are above materiality thresholds at least annually or more regularly when individual circumstances require. Impairment allowances on individually assessed accounts are determined by an evaluation of the incurred loss at balance-sheet date on a case-by-case basis, and are applied to all individually significant accounts. The assessment normally encompasses collateral held (including re-confirmation of its enforceability) and the anticipated receipts for that individual account.

Collectively assessed impairment allowances are provided for portfolios of homogenous assets by using the available historical experience, experienced judgment and statistical techniques.

a-4 Pattern of measuring the general banking risk

In addition to the four categories of the Bank's credit ratings indicated in note (a/1), the management makes small groups more detailed according to the CBE rules, assets facing credit risk are classified to detailed conditions relying greatly on customer's information, activities, financial position and his regular payments to his debts.

The bank calculates the provisions needed for assets facing credit risk impairment in addition to credit regulations according to special percentages. From CBE, in the case of increase of impairment loss provision needed according to CBE than that for purposes of making the financial statements according to the Egyptian accounting standards, the risk of general banking reserve is included in owners equity deducted from the retained earning with this increase, this reserve is modified with periodic basis with the increase and decrease, which equals the increase in provisions and this reserve is not distributed, discloser no.(31/a) present the movement on the reserve account during the fiscal year.

And this is categories of institutional worthiness according to internal ratings according to CBE rules and rates of provisions needed for assets impairment related to credit risk:

CBE <u>Rating</u>	Categorization	Provision <u>%</u>	Internal <u>Rating</u>	Internal Categorization
1	Low Risk	0	1	Performing loans

Off Balance sheet items exposed to credit risk:		
Letter of Credit	59,896,518	65,684,469
Letter of guarantee	121,262,449	91,174,417
Total	181,158,967	156,858,886

The above table represents the worst-case scenario of credit risk exposure to the Bank at 31 December 2014 and at 31 December 2013, without taking in consideration any guarantee for balance sheet items, amounts stated depend on the net carrying amounts shown in the balance sheet.

- As shown above, 27.47 % of the maximum limit exposed to credit risk results from loans and credit facilities to customers at 31 December 2014 against 23.24 % at 31 December 2013 while investments in debt instruments represent 55.12% at 31 December 2014 against 45.67% at 31 December 2013.
- Management is confident in its ability to continue to control and sustain minimal exposure of credit risk to the bank resulting from both its loan and advances portfolio and debt securities based on the following:
- 97.39% of the loans and advances portfolio is categorized in the top two grades of the internal rating system against 93.69% at 31 December 2013.
- 96.16% of the loans and advances portfolio are considered neither past due nor impaired against 95.61% at 31 December 2013.

- The bank has introduced a more stringent selection process upon granting loans and advances during the financial year ended at 31 December 2014.
- More than 97.63% at 31 December 2014 against 93.40% at 31 December 2013 from investments in debt instruments and treasury bills represent debt instruments on the Egyptian Government.

a-6 Loans and credit facilities to customers

The status of balances of loans and credit facilities to customers in terms of credit ratings as follow:

	<u>31/12/2014</u> <u>US Dollar</u>	31/12/2013 US Dollar
Loans and credit facilities		
Neither past due nor impaired	1,172,688,833	735,330,994

b. Market risk

The bank takes on exposure to market risk, which is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk arises from open positions in interest rate, currency and equity products, all of which are exposed to general and specific market movements and changes in the level of volatility of market rates or prices such as interest rates, credit spreads, foreign exchange rates and equity prices. The Bank separates exposures to market risk into either trading or non-trading portfolios.

The market risks arising from trading and non-trading activities are concentrated in the Bank in the risk management department.

Trading portfolios include those positions arising from market-making transactions where the Bank acts directly as principal with clients or with the market ,Non-trading portfolios primarily arise from the interest rate management of the entity's retail and commercial banking assets and liabilities. Non-trading portfolios also consist of foreign exchange and equity risks arising from the Bank's held-to-maturity and available-for-sale investments.

b-1 Foreign exchange volatility risk

The Bank takes on exposure to the effects of fluctuations in the prevailing foreign currency exchange rates on its financial position and cash flows. The Board sets limits on the level of exposure by currency and in aggregate for both overnight and intra-day positions, which are monitored daily. The table below summarizes the Bank's exposure to foreign currency exchange rate risk at end of the year. Included in the table are the Bank's financial instruments at carrying amounts, categorized by currency.

b-2 <u>Interest rate risk</u>

Cash flow interest rate risk is the risk that the future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Fair value interest rate risk is the risk that the value of a financial instrument will fluctuate because of changes in market interest rates. The Board sets limits on the level of mismatch of interest rate reprising that may be undertaken, which is monitored daily by Assets & Liabilities Management Dept.

c. Liquidity risk

Liquidity risk is the risk that the Bank is unable to meet its payment obligations associated with its financial liabilities when they fall due and to replace funds when they are withdrawn. The consequence may be the failure to meet obligations to repay depositors and fulfill commitments to lend.

Liquidity risk management process

The Bank's liquidity management process, as carried out within the Bank and monitored by a separate team in Assets & Liabilities Management Dept, includes:

- Day-to-day funding, managed by monitoring future cash flows to ensure that requirements can be met. This includes replenishment of funds as they mature or is borrowed by customers. The Bank maintains an active presence in global money markets to enable this to happen.
- Maintaining a portfolio of highly marketable assets that can easily be liquidated as protection against any unforeseen interruption to cash flow.
- Monitoring balance sheet liquidity ratios against internal and requirements of central bank of Egypt.
- Managing the concentration and profile of debt maturities.
- Monitoring and reporting take the form of cash flow measurement and projections for the next day, week and month respectively, as these are key periods for liquidity management. The starting point for those projections is an analysis of the contractual maturity of the financial liabilities and the expected collection date of the financial assets. Assets & Liabilities Management Dept. also monitors unmatched medium-term assets, the level and type of un drawn lending commitments, the usage of overdraft facilities and the impact of contingent liabilities such as standby letters of credit and guarantees.

Funding approach

Sources of liquidity are regularly reviewed by a separate jointly team in Bank Assets & liabilities Management, liabilities Investments to maintain a wide diversification by currency, provider, product and term.

Financial Statements for the year ended December 31, 2014

d. Fair value of financial assets and liabilities

Due from banks

The fair value of floating rate placements and overnight deposits is their carrying amount. The estimated fair value of fixed interest bearing deposits is based on discounted cash flows using prevailing money-market interest rates for debts with similar credit risk and remaining maturity.

- Loans and credit facilities to customers

Loans and credit facilities are net of provisions for impairment. The estimated fair value of loans and credit facilities represents the discounted amount of estimated future cash flow expected to be received. Expected cash flow are discounted at current market rates to determine fair value.

- Financial investment

Financial investment securities include only interest-bearing assets held to maturity; assets classified as available for sale are measured at fair value. Fair value for held-to-maturity assets is based on market prices or broker/dealer price quotations. Where this information is not available, fair value is estimated using quoted market prices for securities with similar credit, maturity and yield characteristics.

Due to other banks and customers

The estimated fair value of deposits with no stated maturity, which includes non-interest-bearing deposits, is the amount repayable on demand.

The estimated fair value of fixed interest-bearing deposits and other borrowings not quoted in an active market is based on discounted cash flows using interest rates for new debts with similar remaining maturity.

e. Capital management

The Bank's objectives when managing capital, which is a broader concept than the 'equity' on the face of balance sheets, are:

- Compliance with capital legal requirements in Egypt.
- To safeguard the Bank's ability to continue as a going concern so that it can continue to provide returns for shareholders and other parties dealing with the bank.
- Maintaining a strong capital base to enhance growth.
- Capital adequacy and uses are reviewed according to the regulatory authority's requirements (CBE) by the bank's management through guidelines developed by the Basel Committee; Data are submitted and filed at CBE on a quarterly basis.

Financial Statements for the year ended December 31, 2014

The CBE requires each bank to:

- Maintaining EGP 500 million as a minimum requirement for the issued and paid-in capital.
- Maintaining a ratio between capital elements, and assets and contingent liability elements weighted by risk weights at 10% or more.

Capital management

The objective of the bank for capital management purposes, the bank's capital includes total equity as reported in the statement of financial position plus some other elements that are managed as capital. As following

- -Compliance with the legally imposed capital requirement in Egypt.
 - Protecting the bank's ability to continue as going concern and enabling it to generate yield for shareholders and other parties dealing with the bank.
- Maintain a strong capital base to enhance growth of the bank's operations.
- Capital adequacy and users are reviewed by the bank's management in accordance with the requirement of the regulatory authority (central bank of Egypt) by bank management; by form relying on basil committee regulations for banking control data are submitted and filed with CBE on quarterly basis.

The bank CBE requires the bank to comply with the following:

- Maintaining EGP 500 million as a minimum requirement for the issue and paid in capital.
- Maintaining a minimum level of capital ratio of 10% calculated as the ratio between total value of the capital element, and the risk—weighted average of the bank's assets and contingent liabilities.

The numerator in the capital adequacy ratio comprises the following 2 tiers

Tier 1: basic capital, which comprises paid in capital (net of treasury stock), plus retained earnings and reserves resulting from profit appropriations (other than general reserve for banking risk & special reserve), less any goodwill previously recognized and any carried forward losses.

Tier 2: subordinate capital which comprises an amount equal to the loan general provision calculated in accordance with the credit rating bases issued by the CBE provided it does not exceed 1.25% from the total risk—weighted average of assets and contingent liabilities ,plus: the carrying amount of subordinated loans /deposit maturing over more than 5 years (provided that such carrying amount shall be reduced 20% of its value in each of last five years of their maturity), plus 45% of the increase in fair value above the carrying amount of available for sale investment, held to maturity investment ,and investments in subsidiaries and associated and 45% from special reserve.

In calculating the numerator of the capital adequacy ratio, total value of tier 2 should not exceed total value of tier 1.Also, total value of subordinated loans (deposits) should not exceed 50% of tier 1.

Assets are risk weighted at a range of 0 to 200% risk classification of these assets is based on the type of the debtor as to reflect the associated credit risk and after consideration of cash collaterals the same treatment in applied for the off—balance sheet items which shall be adjusted to reflect the contingent nature of and potential loss on these amounts

Capital adequacy standard has been prepared base on Basel II requirements, and central Bank of Egypt Board of directors has approved in its meeting held on December 18, 2012, which has been issued on December 24, 2012

The table below summarizes the composition of tier 1, tier 2 and capital adequacy ratio based on Basel II

	31/12/2014 <u>In</u> <u>thousand</u> <u>EGP</u>	31/12/2013 <u>In</u> thousand <u>EGP</u>
Tier 1 after exclusions

Capital adequacy Ratio	12.40%	15.39%

^{*} Value of the Egyptian pound on the basis of the closing rate of the dollar at the balance sheet date.

Financial Statements for the year ended December 31, 2014

4. <u>SIGNIFICANT ACCOUNTING ESTIMATES AND JUDGMENTS</u>

The Bank makes estimates and assumptions that affect the reported amounts of assets and liabilities within the next financial year. Estimates and judgments are continually evaluated and based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances and available info.

A) Impairment losses on loans and credit facilities

The Bank reviews its loan portfolios to assess impairment at least on a quarterly basis. In determining whether an impairment loss should be recorded in the income statement, the Bank make judgments as to whether there is any observable data indicating that there is a measurable decrease in the estimated future cash flow from a portfolio of loans before the decrease can be with an individual loan in that portfolio. This evidence may include observable data indicating that there has been an adverse change in the payment status of borrowers in a Bank, or national economic conditions that correlate with defaults on assets in the Bank. Management uses estimates based on historical loss experience for assets with credit risk characteristics and objective evidence of impairment similar to those in the portfolio when scheduling its future cash flows. The methodology and assumptions used for estimating both the amount and timing of future cash flows are reviewed regularly to reduce any differences between loss estimates and actual loss experience.

B) Impairment of available for-sale equity instruments

The Bank determines that available-for-sale equity investments are impaired when there has been a significant or prolonged decline in the fair value below its cost. This determination of what is significant or prolonged requires judgment. In making this judgment, the Bank evaluates among other factors, the normal volatility in share price. In addition, impairment may be appropriate when there is evidence of deterioration in the financial health of the investee, industry and sector performance, changes in technology, and operational and financing cash flows.

C) Held-to-maturity investments

The non-derivative financial assets with fixed or determinable payments and fixed maturity are being classified held to maturity. This classification requires significant judgment. There for the bank tests whether there is a genuine intention and ability to hold such investments to maturity. If the Bank fails to keep these investments to maturity other than for the specific circumstances – for example an insignificant amount close to maturity it will be required to reclassify the entire category as available for sale. The investments would therefore be measured at fair value not amortized cost in addition to suspending the classification of any of the investments in that item.

If the use of the classification of the investments is suspended as held to maturity, it will increase the book value of US Dollars 3,873,838 to fair value by recording an entry in the fair value reserve within the equity.

Financial Statements for the year ended December 31, 2014

5. Sectorial Analysis

A - Sectorial Analysis for activities

Sectorial activity includes operations and assets used in providing banking services and managing risks surrounding it and the income associated with this activity that may differ from the rest of the other activities.

The sectorial analysis of operations includes, according to the received banking operations, the following:

The large, medium and small enterprises.

Activities include current accounts, deposits, and debit current accounts and loans and credit facilities and financial derivatives.

<u>Investments</u>

Activities include company mergers and purchase of investments and financing of corporate restructuring and financial instruments.

<u>Individuals</u>

Activities include current and savings accounts, deposits, credit cards, personal loans and mortgages.

Other Activities

Include other banking services, such as money management.

Transactions between sectorial activities are held in accordance with the standard cycle of activity of the bank. The assets and liabilities include operating assets and liabilities as displayed in the financial position of the bank.

Financial Statements for the year ended December 31, 2014
