Report on limited review of interim financial statements

To The board of Directors of Societe Arabe Internationale De Banque (S.A.E)

Introduction

We have performed a limited review for the accompanying interim financial statements of Societe Arabe Internationale De Banque (S.A.E) which comprise of the statement of financial position as of March 31, 2022 and the related statements of income, other comprehensive income, cash flows and changes in shareholders' equity statement for the three-months period then ended, and a summary of significant accounting policies and other explanatory notes. Management is responsible for the preparation and fair presentation of these interim financial statements in accordance with the rules of preparation and presentation of the banks' financial statements, basis of recognition and measurement issued by Central Bank of Egypt on December 16, 2008 as amended by the regulations issued on February 26, 2019 and in light of the prevailing Egyptian laws and regulations. Our responsibility is to express a conclusion on these interim financial statements based on our limited review.

Scope of Limited Review

We conducted our limited review in accordance with Egyptian Standard on Review Engagements 2410, "Limited Review of Interim Financial Statements Performed by the Independent Auditor of the Entity." A limited review of interim financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters in the bank and applying analytical and other limited review procedures. A limited review is substantially less in scope than an audit conducted in accordance with Egyptian Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these interim financial statements.

Conclusion

Based on our limited review, nothing has come to our attention that causes us to believe that the accompanying interim financial statements do not present fairly, in all material respects, the financial position Societe Arabe Internationale De Banque (S.A.E) as at March 31, 2022 and its financial performance and its cash flows for the three-months period then ended in accordance with rules of preparation and presentation of the banks' financial statements, basis of recognition and measurement issued by Central Bank of Egypt on December 16, 2008 as amended by the regulations issued on February 26, 2019 and in light of the prevailing Egyptian laws and regulations related to the preparation of these financial statements.

Société Arabe Internationale De Banque (S.A.E.)

Notes on the financial statements

For the three months ended March 31, 2022

(All amounts in the notes are presented in US dollars unless otherwise stated)

1- General Information

Société Arabe Internationale de Banque (saib) - S.A.E., was established in accordance with Law No. 43 on 1974 of the Arab Republic of Egypt, recorded in the commercial register at No.97328, and recorded in the Central Bank of Egypt's register at No. 69 on September 12, 1976. The Head Office of the bank is located at 56 Gamaet El Dewal El Arabeya St, Giza. The Bank is listed in the Egyptian Exchange "EGX".

The Bank provides corporate and retail banking services and investment services in Egypt and abroad through the bank's Head Office and 35 branches. The bank has 1,641 employees as of March 31, 2022 (December 31, 2021: 1,628 employees).

The banks' financial statements have been authorized for issue by the board of directors on May 26, 2022.

2- Summary of the significant accounting policies applied

The principal accounting policies applied in the preparation of these financial statements are set out below. These policies are consistently applied on all years presented, unless otherwise stated.

a- Basis for Preparation of Financial Statements

The financial statements are prepared in accordance with the rules for preparation of banks' financial statements and the basis for recognition and measurement approved by the Board of Directors of the Central Bank of Egypt on December 16, 2008, and in light of the relevant local laws and regulations. In addition, the requirements of IFRS 9 Financial Instruments also apply pursuant to the Central Bank of Egypt's instructions issued on January 28, 2018 for which the final rules for preparation of banks' financial statements have been issued on February 26, 2019. Referral to the Egyptian Accounting Standards are made where matters are not specifically addressed by the Central Bank of Egypt's rules.

b- <u>Investments in associates</u>

Associates are entities over which the bank, whether directly or indirectly, exercises significant influence but not control, or of which the bank holds 20% to 50% ownership in shares or voting rights in accordance with the law of the Central Bank of Egypt No. 94 of the year 2020.

The purchase method is used in accounting for the bank's acquisitions of entities. The acquisition cost is measured at the fair value of the consideration, or other assets, given by the bank for acquisition and/or the equity instruments issued, liabilities incurred by the bank, and/or liabilities assumed on behalf of the acquired entity at the date of exchange, plus any costs directly attributable to the acquisition. The net assets, including contingent liabilities, acquired are measured at the acquisition-date with fair value.

Investments in associates are subsequently accounted for, in the bank's financial statements, using the equity method under which the investment in any associate is initially recognized at cost, and the carrying amount of the investment increases or decreases thereafter to recognize the bank's share of the associate's profits or losses after the acquisition date. This share is reported within the "profits or losses from investments in associates" line-item in the income statement upon preparation of the financial statements. The carrying amount of the investment is also reduced by dividend distributions received the bank's associate.

c- Segment reporting

A business segment is a group of assets and operations engaged in providing products or services that are subject to risks and returns that are different from those of other business segments. A geographical segment is engaged in providing products or services within a particular economic environment that are subject to risks and returns different from those of segments operating in other economic environments.

d- Foreign currency translation

Functional and presentation currency and foreign currency translation

- The bank's financial statements are presented in the US dollar currency, which is the bank's functional and presentation currency. The bank maintains its accounting records in US dollars. Transactions denominated in foreign currencies during the year are translated to US Dollar using the exchange rates prevailing at the date of the transaction. For the purposes of preparing the financial statements, monetary assets and liabilities denominated in currencies (other than the US dollar) are translated into the US dollar at the end of each reporting date using the exchange rates then prevailing, with foreign exchange gains or losses resulting from translation and settlement of such transactions and balances recognized in profit or loss in the income statement.
- As for investments in equity instruments (non-monetary in nature) designated as at fair value through other comprehensive income, differences arising from changes in exchange rates are recognized in other comprehensive income and accumulated in equity.
- Changes in the fair value of investments in debt instruments; which represent monetary financial instruments denominated in foreign currencies and classified as financial investments through other comprehensive income (FVOCI) are analyzed into differences resulting from changes in amortized cost of the instrument, differences resulting from changes in the applicable exchange rates, and differences resulting from changes in the fair value of the instrument. Differences resulting from changes in amortized cost are recognized in the income statement and reported in "interest on loans and similar income" line-item, whereas differences resulting from changes in foreign exchange rates are recognized in the income statement. The remaining differences resulting from changes in fair value are recognized in other comprehensive income and accumulated in equity in the 'revaluation reserve of investments designated as at FVTOCI' line-item.
- Valuation differences arising on the measurement of non-monetary items at fair value include gains or losses resulting from changes in foreign currency exchange rates used to translate those items. Total fair value changes arising on the measurement of equity instruments classified as at fair value through profit or loss (FVTPL) are recognized in the income statement, whereas total fair value changes arising on the measurement of equity instruments at FVOCI are recognized in other comprehensive income and accumulated directly in equity in "the revaluation reserve of investments designated as at FVTOCI".
- All amounts reported in the accompanying notes of the financial statements are in US dollar unless otherwise stated.

e- Financial assets and liabilities

Classification of financial assets and liabilities

- Financial assets have been classified into the following three main categories:
 - Financial assets measured at amortized cost (AC)
 - Financial assets measured at fair value through other comprehensive income (FVTOCI)
 - Financial assets measured at fair value through profit or loss (FVTPL)

IFRS 9's classification is generally based on the bank's business models within which financial assets are held and managed and the contractual cash flows characteristics of the assets.

- A financial asset is classified and measured as at amortized cost if the following two conditions are met and the financial asset is not classified as at fair value through profit or loss:
 - 1- The financial asset is held within a business model whose objective is to hold financial assets in order to collect contractual cash flows; and
 - 2- The contractual terms of the financial assets give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding (SPPI).

- Debt instruments are measured in fair value through other comprehensive income (FVTOCI) only if they meet the following two conditions and are not classified as measured at fair value through profit or loss:
 - **1-** The financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling the financial assets; and
 - 2- The contractual terms of the financial assets give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding (SPPI).
- On initial recognition of an investment in an equity instrument that are not held for trading, the bank may make an irrevocable election to present subsequent changes in fair value of that equity investment in other comprehensive income. This election is made on an instrument-by-instrument basis.
- All other financial assets are classified as at fair value through profit or loss.
- In addition, the bank may make an irrevocable election to designate an investment in a debt instrument that meets either the amortized cost criteria or the FVTOCI criteria, upon initial recognition, as at fair value through profit or loss, if such designation eliminates or significantly reduces a measurement or recognition inconsistency (so called 'accounting mismatch').

Business model assessment

The bank assesses the objective of the business model within which the asset is held at the portfolio level because this level best reflects how the business is managed and how information is reported to management. The information considered includes:

- The stated policies and objectives of the portfolio and the operational mechanism of those policies in practice. In particular, an assessment is made of whether the management strategy focuses on earning contractual interest income, matching the duration of financial assets with the duration of financial liabilities that finance those assets, or achieving cash flows through the sale of assets
- How performance of the portfolio is evaluated and reported to the bank's management
- The risks that affect the performance of the business model (and the financial assets held within that business model) and, in particular, the way in which those risks are managed
- The frequency, value, and timing of sales transactions in prior years, the reasons for those sales, and expectations about future sales activity. Nevertheless, information about sales activity is not considered in isolation but as part of a comprehensive assessment of how the bank's stated objective of managing financial assets and realizing their cash flows is achieved.

Financial assets held for trading purposes or whose performance is assessed on a fair value basis are measured at fair value through profit or loss because they are neither held only to collect contractual cash flows nor held both to collect contractual cash flows and to sell financial assets.

1- Both debt and equity instruments are classified and measured as follows:

Financial		Measurement basis according to business models			
Instrument	Amortized Cost	Fair '	Fair Value		
		Through Other Comprehensive Income	Through Profit or Loss		
Equity Instruments	Not applicable	A one-time irrevocable election on initial recognition	Default classification for equity instruments		
Debt Instruments	Business model within which assets are held to collect contractual cash flows	Business model within which assets are held both to collect contractual cash flows and sell	Business model within which assets are held for trading		

2- The bank prepares, documents, and approves the Business Model(s) in accordance with the requirements of the International Financial Reporting Standard IFRS 9 and in a way that reflects the bank's strategy established for managing its financial assets and their cash flows as follows:

Financial Asset	Business Model	Main Characteristics	
Financial assets classified as at amortized cost (AC)	Business model within which financial assets are held to collect contractual cash flows	 The objective of the business model is to hold financial assets to collect contractual cash flows that are solely payments of principal and interest on the principal amount outstanding. 	
		The sale is an exceptional and incidental event under the objective of this model and in accordance with the conditions set out in the standard when a deterioration occurs in the credit ability of the financial instrument's issuer.	
		 The least sales in terms of frequency and value. 	
		The bank clearly documents and approves the reasons for each sale transaction and the extent to which it is consistent with the requirements of the standard.	
Financial assets classified as at fair value through other comprehensive income (FVTOCI) Business model within which the financial assets are held to collect contractual cash flows and to sell	 Both collection of contractual cash flows and sale integrate to achieve the model's objective. 		
	 High turnover (in terms of sales frequency and value) compared to the business model of holding the assets to collect contractual cash flows. 		
Financial assets classified as at fair value through profit or loss (FVTPL) Other business models which include (held for trading - managing financial assets on a fair value basis - maximizing cash flows through sale)	The objective of the business model is not to hold the financial asset to collect contractual cash flows or to collect contractual cash flows and sell.		
	fair value basis -	 Collection of the contractual cash flows is an incidental event under the objective of the model. 	
	 Managing financial assets on the basis of fair value through profit or loss is made to avoid an accounting mismatch. 		
			 Criteria for classifying financial assets as at fair value through profit or loss should be met.
	All the following conditions are met in respect of the financial assets that the bank classifies, upon acquisition, as at fair value through profit or loss:		
		They are listed on a domestic or foreign stock exchange.	
		 They are actively traded within the three months preceding the date of acquisition. 	

Assessment of whether the contractual cash flows of the asset are solely payments of principal and interest on the principal amount outstanding

For the purpose of this assessment, the bank defines the principal amount of the financial instrument as the fair value of the financial asset at initial recognition. Interest is defined as a consideration for the time value of money and the credit risk associated with holding the asset for a particular year of time. Interest can also include consideration for other basic lending risks and costs (e.g. liquidity risk and administrative costs) as well as a profit margin.

In order to assess whether the contractual cash flows of the asset are solely payments of principal and interest on the principal amount outstanding, the bank considers the contractual terms of the instrument. This includes an assessment of whether the financial asset contains contractual terms that may change the timing or amount of contractual cash flows rendering them unable to meet that requirement.

To make that assessment, the bank takes the following into account:

- Possible events that may change the amount and timing of cash flows.
- Leverage characteristics (rate of return, maturities, currency type...).
- Provisions for early repayment and term extensions.
- Conditions that may limit the bank's ability to claim cash flows from certain assets.
- Characteristics that may adjust the time value of money (repricing rate of return on an annual basis).
- The bank doesn't make reclassifications between groups of financial asset unless, and only when, the business model has changed. This occurs on a rarely, or infrequent and immaterial-basis, or when the credit worthiness of one of the debt instruments, classified as at amortized cost, deteriorates significantly.

Classification and measurement of financial assets and financial liabilities

The following table reports financial assets and financial liabilities according to the business model classification. The amounts reported are based on the net book value presented in the statement of financial position.

		<u>31/3/2022</u>

Initial recognition and measurement:

- Financial assets and financial liabilities are initially recognized on the date on which the bank becomes a party to the contractual provisions of the financial instrument.
- A financial asset or financial liability is measured initially at fair value. Financial assets and financial liabilities other than those subsequently measured at fair value through profit or loss, are initially measured at fair value plus transaction costs that are directly attributable to the acquisition or issue of those assets and liabilities.

Classification:

Financial Assets

The bank classifies its financial assets between the following groups: financial assets measured at amortized cost, financial assets measured at fair value through other comprehensive income, and financial assets measured at fair value through profit or loss. This classification is generally based on the business model under which the financial assets are managed and their contractual cash flows.

e-1 Financial assets classified as at amortized cost

The financial asset is held within a business model under which financial assets are held to collect contractual cash flows.

- The objective of the business model is to hold the financial assets to collect contractual cash flows that are solely payments of principal and interest on the principal amount outstanding
- Sale is an exceptional and incidental event in relation to the objective of this model and is made in accordance with the following criteria of the standard:

Deterioration in the credit ability of the issuer of the financial instrument.

The least sales in terms of frequency and value, where the objective from bank's business model at acquisition should not be directed toward disposal of these instruments prior to maturity dates except to the extent of the situations permitted by the standard (sales that are immaterial or infrequent or close to the maturity date)

A clear and reliable documentation should be made for the reasons of each sale transaction and the extent to which it complies with the requirements of the standard.

e-2 Financial assets classified as at fair value through other comprehensive income

- The financial asset is held within a business model under which financial assets are held to collect contractual cash flows and sell.
- Both collecting contractual cash flows and selling integrate to achieve the model objective.
- High sales (in terms of frequency and value) compared to the business model designated for collecting contractual cash flows.

e-3 Financial assets classified as at fair value through profit or loss

- The financial asset is held within other business models that include (trading managing financial assets on a fair value basis maximizing cash flows through selling).
- The objective of the business model is not to hold the financial asset for collecting contractual cash flows or for the collection of contractual cash flows and selling.
- Collecting contractual cash flows is incidental in relation to the objective of the model.
- Managing financial assets on a fair value basis through profit or loss to avoid an accounting mismatch (in compound financial instruments).

The characteristics of the business model are:

- Structuring of a range of activities designed to extract specific outputs.
- Represents a full framework for a specific activity (inputs, activities, outputs).
- A single business model can include sub-business models.
- Can include more than one function or department.

Financial Liabilities

- * On initial recognition, the bank classifies financial liabilities into financial liabilities subsequently measured at amortized cost, and financial liabilities subsequently measured at fair value through profit or loss based on the objective of the bank's business model.
- * All financial liabilities are recognized initially at fair value on the date in which the bank becomes a party to the contractual provisions of the financial instrument.
- * Financial liabilities classified as at amortized cost are subsequently measured at amortized cost using the effective interest rate method.
- * Financial liabilities classified as at fair value through profit or loss are subsequently measured at fair value with the resultant fair value changes recognized in profit or loss. However, for financial liabilities that are designated as at FVTPL, the amount of change in the fair value of the financial liability that is attributable to changes in the credit risk of that liability is recognized in other comprehensive income, unless the recognition of the effects of changes in the liability's credit risk in other comprehensive income would create or enlarge an accounting mismatch in profit or loss. The remaining amount of change in the fair value of liability is recognized in profit or loss.

Reclassification:

- * Financial assets are not reclassified after initial recognition, except when and only when the bank changes the business model for managing these assets.
- * In all cases, no reclassification is made between financial liabilities classified as at fair value through profit or loss and financial liabilities classified as at amortized cost.

De-recognition:

Financial assets

- * A financial asset is derecognized when the contractual right to receive the cash flows from the asset expire, or when the bank transfers the right to the contractual cash flows in a transaction that transfers substantially all of the risks and rewards associated with ownership of the financial asset to another party.
- * When a financial asset in debt instrument is derecognized, recognize in income statement the difference between the carrying amount of the asset (or the carrying amount assigned to the part of the asset that is derecognized) and the sum of both the consideration received (including any new asset obtained less any new liability incurred) and any gains or losses previously recognized and accumulated in the revaluation reserve for debt investments classified as at fair value through other comprehensive income.
- * Starting from 1 January 2019 any gains or losses recognized in other comprehensive income and accumulated in equity, relating to investments in equity instruments that were designated as at fair value through other comprehensive income, are not reclassified subsequently to profit or loss upon derecognition of the asset but are directly transferred to retained earnings. Any interest that has arisen from or has been retained in the original asset qualifying for de-recognition (that satisfies the de-recognition criteria) shall be recognized as a separate asset or liability.
- * When the bank enters into transactions whereby it transfers assets previously recognized in the statement of financial position but retains all or substantially all of the risks and rewards associated with the transferred asset or a part thereof, the transferred asset is not derecognized.
- * With respect to transactions in which the bank neither transfers nor retains substantially all of the risks and rewards of ownership and continues to control the transferred asset, the bank continues to recognize the asset to the extent of its continuing involvement with the asset. The bank's continuing involvement with the financial asset is determined by the extent to which the bank is exposed to changes in the value of the transferred asset.
- * In some transactions, the bank retains an obligation to service a transferred asset in exchange for a commission, in which case, the transferred asset is derecognized if it satisfies the de-recognition criteria, and a servicing asset or liability is recognized from the servicing contract. If the servicing commission exceeds the compensation that is commensurate with the services performed, a servicing asset is recognized, whereas a servicing liability is recognized if the servicing commission is less than the compensation that is commensurate with the services performed.

Financial liabilities

* A financial liability is derecognized by the bank when the obligation is discharged, cancelled, or if the contractual term of the liability has expired.

Modifications to financial assets and financial liabilities:

Financial assets

- * If the terms of a financial asset are modified, the bank assesses whether the cash flows of the modified asset are substantially different. If the cash flows are substantially different, then the contractual rights to the cash flows from the original financial asset are considered expired and, the original financial asset is derecognized. In that case, a new financial asset is recognized at fair value, with gains or losses arising from adjustment to the carrying amount of the financial asset recognized in profit or loss. If, however, this adjustment occurred due to financial difficulties of the borrower, then any resulting gains are deferred and presented with the accumulated impairment losses whereas any resulting losses are recognized immediately in profit or loss.
- * If the cash flows of the modified asset, classified at amortized cost, are not substantially different, then the adjustment does not result in de-recognition of the financial asset.

Financial Liabilities

* The bank adjusts a financial liability when its terms are modified and the cash flows of the modified liability are substantially different. In this case, a new financial liability is recognized at fair value based on the modified terms. The difference between the carrying amount of the old financial liability and the new financial liability (subject to the modified terms) is recognized in profit or loss.

f- Offsetting financial instruments

- Financial assets and financial liabilities are offset and the net amount reported in the statement of financial
 position when the bank currently has a legally enforceable right to set off the recognized amounts and
 intends either to settle on a net basis, or realize the asset and settle the liability simultaneously.
- Agreements to buy treasury bills with an obligation to re-sell and agreements to sell treasury bills with an obligation to re-purchase are presented on a net basis in the statement of financial position within the "treasury bills" line-item.

g- Interest income and expense

Interest income and interest expense on all interest-bearing financial instruments, except for those classified as held for trading or those designated upon initial recognition as at fair value through profit or loss, are recognized within "Interest income from loans and similar income" and "Interest expense on deposits and similar expenses" line items in the income statement using the effective interest rate method.

The effective interest rate is a method of calculating the amortized cost of a debt instrument whether it is a financial asset or a financial liability and of allocating its interest income or interest expense over the relevant year. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter year, to the net carrying amount of the financial asset or financial liability on initial recognition. When calculating the effective interest rate, the bank estimates the future cash flows, considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, whereas transaction costs include all premiums or discounts.

When loans and receivables are classified as non-performing or credit-impaired (stage-3), as the case may be, interest income thereon ceases to be recognized in profit or loss and is rather recorded off-balance sheet as marginalized interest in statistical records. Interest income on these loans is recognized as revenue on a cash basis as follows:

- For retail loans, personal loans, small and medium business loans, Mortgage loans for personal housing and small loans for businesses, when interest income is collected and after recovery of all arrears.
- For corporate loans, the cash basis also applies. That is, interest income calculated thereafter in accordance with the rescheduling conditions is capitalized on the loan and deferred until the bank collects 25% of the rescheduled installments and payment of the scheduled installments continues for at least one year. If the customer continues to pay installments on their due dates, interest income including the deferred amount capitalized on the outstanding loan (interest income on the performing rescheduled amount) is recognized in profit or loss and reported within revenues. Interest income that is marginalized and reported off-balance sheet prior to the date when the loan was rescheduled is not recognized in profit or loss until the total balance of loan, prior to that date, is paid in full.
- Other operating losses are reported within other operating expenses other.

h- Fees and commissions income

Fees and commissions for servicing a loan or facility that is measured at amortized cost are recognized as income as the service is provided. Recognition as income, however, ceases for fees and commissions on non-performing or credit-impaired loans or receivables (stage-3) and, instead, they are recorded off-balance sheet in statistical records. These fees and commissions are recognized as income on the cash basis that is, when interest income on these loans is recognized as income in accordance with the requirements disclosed in policy note No. (2-g). Fees that are considered integral part of the effective interest rate are generally accounted for as an adjustment to the effective interest rate.

Commitment fees received by the bank to originate a loan are deferred if it is probable that the bank will enter into a specific lending arrangement on the basis that these fees are regarded as a compensation for the bank's ongoing involvement with the acquisition of the financial instrument. These fees are recognized as an adjustment to the effective interest rate of the originated loan. If the commitment expires without the bank making the loan, the fees are recognized as income on expiry of the commitment year.

Fees on debt instruments that are measured at fair value through profit or loss are recognized as income on initial recognition. Loan syndication fees are recognized as income when the syndication has been completed and the bank has retained no part of the loan package for itself or has retained a part at the same effective interest rate for comparable risks as other participants.

Fees and commissions that are earned on negotiation or co-negotiation of a transaction for another party, such as arrangements for the allotment of shares or other financial instruments, or the acquisition or sale of entities on behalf of that party, are recognized in profit or loss when the related transaction is completed. Income from fees for administrative consultancy and other services is usually recognized on a time proportionate basis over the year in which the service is rendered. Fees from financial planning management and custodian services performed for customers over long years are recognized as income over the year in which the service is performed.

i- <u>Dividend Income</u>

- Dividend income is recognized in the income statement when the bank's right to receive payment is established.

j- Purchase and resale agreements and sale and repurchase agreements (repos and reverse repos)

Agreements for sale of financial instruments with an obligation to repurchase are reported within assets as a deduction from the "treasury bills" line item in the statement of financial position, whereas the bank's obligation arising under agreements for the purchase of financial instruments with an obligation to resell, is reported as an addition to the "treasury bills" line item in the statement of financial position. Differences between the selling and repurchase price or between the purchase and reselling price is recognized as interest expense or interest income throughout the year of each agreement using the effective interest rate method.

k- Impairment of financial assets

The bank reviews all of its financial assets except for those that are measured at fair value through profit or loss to assess whether they have impaired as described below. Financial assets are classified at the reporting date in three stages:

- Stage one: financial assets that have not experienced significant increase in credit risk since initial recognition. A 12-month expected credit loss is recognized for financial assets at this stage.
- Stage two: financial assets that have experienced significant increase in credit risk since the initial recognition. Life-time expected credit loss is recognized for financial assets at this stage.
- Stage three: financial assets that are credit-impaired and for which objective evidence(s) is available indicating that they have impaired (non-performing). Life-time expected credit loss is also recognized for financial assets at this stage on the basis of the difference between the carrying amount of the instrument and the present value of expected future cash flows.

Impairment in the value of financial assets (expected credit losses) is measured as follows:

- A financial asset that has a low credit risk upon initial recognition is classified in stage one, and its credit risk
 is monitored on an ongoing basis by the bank's credit risk management.
- If it is determined that a significant increase in credit risk of the financial asset has occurred since initial
 recognition, the financial asset is transferred to stage two, and is not yet considered to be impaired at this
 stage.
- When indicators of impairment in the value of the financial asset exist, the asset is transferred to stage three.
- The bank classifies directly in stage 2 any purchased or originated financial assets whose credit risk on initial recognition is significantly higher as compared to the bank's ratings for financial assets with low credit risks. Accordingly, the expected credit losses for these assets are measured on the basis of lifetime expected credit losses throughout the life of the asset.

k-1 Significant increase in credit risk:

The bank considers that a significant increase in credit risk of a financial asset has occurred when one or more of the following quantitative and qualitative criteria, as well as, factors indicating default, are satisfied.

K-1-1 Quantitative criteria:

The bank considers the credit risk on a financial instrument has increased significantly since initial recognition if the probability of a default occurring on the financial instrument at the reporting date increased compared to the probability of a default occurring at the date of initial recognition of that instrument, within the bank's framework for acceptable risks.

K-1-2 Qualitative criteria:

Retail bank loans and small and micro enterprises

If the borrower encounters one or more of the following events:

- The borrower applied for transferring short-term to long-term repayments as a result of adverse effects related to the borrower's cash flow.
- Extend the year over which repayment is made at the request of the borrower.
- Repeated arrears during the previous 12 months.
- Future economic changes adversely affecting the borrower's future cash flows.

Loans for medium enterprises and projects

If the borrower is on the watch-list and/or if the financial instrument encountered one or more of the following events:

- Significant increase in the rate of return on the financial asset as a result of increased credit risk.
- Significant adverse changes in the business, financial, or economic conditions under which the borrower operates.
- Request for a restructuring or modification due to difficulties encountered by the borrower.
- An actual or expected significant deterioration in the operating results or cash flows
- Future economic changes affecting the borrower's future cash flows.
- Early signs of cash flow/liquidity problems such as delays in servicing creditors/commercial loans.
- Cancellation by the bank of one of its direct advances due to increase in the borrower's credit risk.

K-1-3 Default:

Starting from 1 January 2019, corporate loans and advances, loans and advances to medium and small-size enterprises, and micro-retail and retail banking loans and advances are included in stage-2 of the ECL model if they are more than 60 days past due (at most) and less than 90 days past due. This year (60 days) will be reduced by (10) days annually until it becomes (30) days within 3 years from the application date (noting that this year has been reduced to 40 days at most starting from 1 January 2021 until 31 December 2021).

K-2 Transitioning among stages:

Switching from stage two to stage one:

A financial asset shall not be transferred from stage two to stage one unless all the quantitative and qualitative factors of stage one are met, all arrears of the financial asset's principal and interest have been fully paid, and after 3 months have lapsed of regular payment and fulfilment of stage one criteria.

Switching from stage three to stage two:

A financial asset shall not be transferred from stage three to stage two until all the following conditions have been met:

- 1- Satisfaction of all quantitative and qualitative factors of stage two.
- 2- Repayment of 25% of the outstanding balance of the financial asset, after payment of the accrued interest whether segregated/ marginalized interest, as appropriate.
- 3- Regular payment for at least 12 months.

I- Intangible assets

I-1 Computer software

Expenditure on upgrade or maintenance of a computer software is recognized as an expense as incurred in profit or loss in the income statement. Costs directly incurred in connection with specific software is recognized as an intangible asset if they are controlled by the bank and it is probable that they will generate future economic benefits exceeding their cost for more than one year. Direct costs include the cost of staff involved in the software-upgrade in addition to a reasonable share of related overheads.

Expenditures incurred are recognized as upgrade costs and added to the original cost of the software if such expenditures will likely increase the efficiency or enhance the performance of the computers software beyond their original specifications.

Cost of the computer software, recognized as an asset, is amortized over a year of 5 years that is, the year over which benefits are expected to arise therefrom.

I-2 Other intangible assets

These are intangible assets, other than goodwill and computer software (for example, trademarks, licenses, benefits of rental contracts).

Other intangible assets are recognized at their acquisition cost and are amortized on a straight-line basis, or on the basis of the economic benefits expected to arise therefrom, over their estimated useful lives. Intangible assets with indefinite useful lives are not amortized but are annually tested for impairment with impairment loss (if any) recognized in profit or loss in the income statement.

m- Fixed assets

Land and buildings comprise mainly the head office premises and the bank's branches and offices. All items of property, plant, and equipment (fixed assets) are stated at historical cost less accumulated depreciation and accumulated impairment losses. Historical cost includes expenditures that are directly attributable to the acquisition of the items.

Subsequent costs are included in the asset's carrying amount or recognized separately, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the bank and the cost of the item can be measured reliably. Repairs and maintenance expenses are recognized in profit or loss within "other operating expenses" line-item during the year in which they are incurred.

Land is not depreciated. Depreciation of other assets is charged so as to write off the cost of assets, less their residual values, over their estimated useful lives using the straight-line method. The estimated useful lives of the assets are described below:

Buildings and constructions	5%	20 years
Integrated automated systems	20%	5 years
Vehicles	20%	5 years
Fixtures and fittings	20%	5 years
Machinery and equipment	20%	5 years
Furniture	20%	5 years

At each reporting date, the residual values and useful lives of the assets are reviewed and adjusted, as appropriate. The carrying amounts of depreciable assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. When the carrying amount of an asset exceeds its recoverable amount, that carrying amount is reduced immediately to its recoverable amount.

The recoverable amount of an asset is the higher of the asset's fair value-less costs of disposal, and value in use. Gains and losses on disposal of fixed assets are determined by comparing proceeds with the carrying amount. These gains or (losses) are recognized in profit or loss within "other operating income" or "other operating expenses" in the income statement.

n- Impairment of non-financial assets

Non-financial assets that have indefinite useful lives (except for goodwill) are not depreciated or amortized but are tested annually for impairment. Depreciable assets are reviewed for impairment whenever events or changes in circumstances indicate that their carrying amounts may not be recoverable.

An impairment loss is recognized and the carrying amount of an asset is reduced to the extent that such carrying amount exceeds the recoverable amount. The recoverable amount is the higher of an asset's fair value-less costs of disposal and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units). At each reporting date, non-financial assets (other than goodwill) that have previously suffered an impairment are reviewed for possible reversal of a previously recognized impairment loss. Any reversal of impairment losses are recognized immediately in profit or loss in the income statement to the extent that the reversal amount eliminates the impairment loss which has been recognized for the asset in prior years.

O- Lease contracts

Finance leases are accounted for in accordance with the rules for preparation of banks financial statements and bases of recognition and measurement approved by the Central Bank of Egypt's Board of Directors on 16 December 2008, if the lease contract entitles the lessee to purchase the asset at a specified date and specified amount, or if the net present value of total minimum lease payments is at least 90% of the fair value of the asset. Other lease contracts are considered operating leases.

o-1 The bank as a lessee

In accounting for financial leases, costs associated with leases, including maintenance cost of leased assets, are recognized as expenses in profit or loss in the income statement in the year during which they are incurred. If the bank decides to exercise its call option over the leased assets in a lease contract, the cost of this call option is capitalized as a fixed asset and depreciated over the expected remaining useful life of that asset on the same basis that is used for assets of a similar type.

Rental payments under operating leases (less any discounts obtained from the lessor) are recognized, on a straight-line basis over the term of the relevant lease, as expenses in profit or loss in the income statement.

p- Cash and cash equivalents

For the purposes of presenting the statement of cash flows, cash and cash equivalents comprise balances with maturities of three months or less from the date of acquisition/placement. These include cash in hand and balances due from Central Bank of Egypt (other than those within the mandatory reserve ratio), due from banks and treasury bills.

q- Other provisions

Provisions for restructuring costs and legal claims are recognized when the bank has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits is required to settle the obligation, and a reliable estimate can be made for the amount of the obligation.

Where there are a number of similar obligations, the probability that an outflow will be required in settlement is determined by considering the class of obligations as a whole. Although the likelihood of outflow for any one item may be small, a provision is recognized (if the other recognition criteria are met).

Provisions are fully or partly reversed to profit or loss in the income statement and reported in the "other operating income/expenses" line-item if it is no longer probable that an outflow of resources embodying economic benefits will be required to fully settle the obligation (or part thereof).

Where an obligation is expected to be settled within more than 12 months from the reporting date, the carrying amount of the provision is calculated at the present value of the cash flows estimated to settle the present obligation using a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability and for which future cash flow estimates have not been adjusted.

r- Financial guarantees

Financial guarantee contracts are those issued by the bank as security for loans payable/ or debit current accounts owed—by the bank's customers—to other entities. These contracts require the bank (issuer) to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the terms of a debt instrument. These financial guarantees are presented to banks, financial institutions, and other parties on behalf of the bank's customers.

A financial guarantee contract is recognized as a liability and measured initially at its fair value (which may reflect a security fee) at the contract date. Financial guarantee contracts are measured subsequently at the higher of (i) the amount recognized initially less, where appropriate, cumulative amortization of the fee recognized in profit or loss on a straight-line basis over of term the guarantee, and (ii) the amount of the loss allowance determined in accordance with the ECL model for financial guarantees.

Any increase in liabilities resulting from financial-guarantee contracts is recognized in profit or loss within "other operating income/expenses" line-item in the income statement.

s- Income taxes

Income tax on the profit or loss for the year includes each of year tax and deferred tax and is recognized in the income statement except for income tax relating to items of equity that are recognized directly in equity. Income tax is recognized based on net taxable profit using the tax rates applicable at the reporting date in addition to tax adjustments for previous years.

Deferred taxes arising from temporary time differences between the carrying amount of assets and liabilities are recognized in accordance with the principles of accounting and value according to the tax base, this is to determinate the value of deferred tax on the expected manner to realize or settle the values of assets and liabilities, using tax rates applicable at the reporting date.

Deferred tax assets of the Bank are recognized when there is a reliable probability to realize a profit subject to tax in the future to be possible through to use that asset, and is reducing the value of deferred tax assets with part of that will not result in tax benefit expected during the following years, that in the case of expected high benefit tax, deferred tax assets will increase within the limits of the above reduced.

t- Borrowings

Loans received by the bank and classified as financial liabilities as at amortized cost are initially recognized at fair value less costs of obtaining the loan (i.e., transaction costs). The loan is subsequently measured at amortized cost, with the difference between the net proceeds received from the loan and the amount payable at maturity recognized in the income statement as an expense in profit or loss over the year of the borrowing using the effective interest rate.

u- Capital

u-1 Cost of capital

Transaction costs directly attributable to the issuance of new shares, the issuance of shares to effect a business combination, or the issuance of share options are reported as a deduction from equity, net of the related income tax effect.

u-2 Dividends

Dividend distributions are recognized as a liability and as a deduction from equity in the reporting year during which the General Assembly of the shareholders approves those distributions. Such distributions includes employees' profit share and the Board of Directors' remuneration stipulated by the articles of incorporation and the Law. The bank does not recognize any liability to employees and board members in its retained earnings until when distribution of those earnings are approved.

v- Fiduciary activities

The bank practices fiduciary activities that result in ownership or management of assets on behalf of individuals, trust, and retirement benefit plans and other institutions. These assets and income arising thereon are excluded from the bank's financial statements, as they are not assets of the bank.

w- Comparative figures

Comparative figures are reclassified, as necessary, to conform to the changes in the financial statements presentation for the current year.

x- Employee benefits

x-1 short-term employee benefits

Short-term employee benefits comprise wages, salaries, contributions to social insurance systems, paid annual leave, bonuses, and non-monetary benefits (such as medical care, housing, cars, and free or subsidized goods and services to current employees) expected to be settled wholly before 12 months after the end of the annual reporting year. Short-term employee benefits are expensed to profit or loss in the income statement in the year during which employees have rendered service entitling them to those benefits.

x-2 Retirement benefits

Benefits under the bank's pension scheme for its employees represent the bank's share in contributions payable to the General Authority for Social Insurance in accordance with the Social Insurance Law No. 79 of 1975 and its amendments.

During each reporting year, the bank pays its share to the General Authority for Social Insurance which is expensed in profit or loss and reported in the income statement as part of wages and salaries within the "administrative expenses" line-item in the year during which the bank's employees render their services.

The bank's obligation to pay benefits under the applicable pension scheme is accounted for as defined contribution plan and, therefore, no further liability arises on the bank with respect to its employees' pension scheme other than its obligation to make the specified contributions.

3- Financial risk management

The bank's activities expose it to a variety of financial risks. Taking risk is core to the financial business and an inevitable consequence of being in business. Analysis, evaluation, and management of some risks or a combination of risks are performed with the objective of balancing risk and return, as appropriate, and minimizing the potential adverse effects on the bank's financial performance. Of the most important types of risks are credit risk, market risk, liquidity risk, and other operational risks. Market risk includes the risk of foreign exchange rates, interest rate risk, and other price risks.

The bank's risk management policies are designed to identify and analyze these risks, to set appropriate risk limits and controls, and to monitor the risks and adhere to the limits using reliable and up-to-date information systems. The bank reviews its risk management policies and systems on a regular basis and adjusts them to reflect changes in markets, products, services, and best emerging applications.

Risk management is carried out by the risk management department in the light of policies adopted by the bank's Board of Directors. The risk management department identifies, evaluates, and addresses financial risks in close cooperation with the bank's various operational units. The Board of Directors provides written principles for the overall risk management, as well as, written policies covering specific risk areas such as credit risk, foreign exchange rates risk, interest rate risk, use of derivatives and non-derivative instruments. In addition, the risk management department is responsible for annual review of risk management and the control environment independently.

a- Credit risk

The bank is exposed to credit risk which is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge its obligations. The credit risk is the most important risk for the bank and, accordingly, management carefully manages the bank's exposure to that risk.

Credit risk mainly emerges from lending activities which result in the recognition of loans and credit facilities, and from investment activities which result in the recognition of debt instruments. Credit risk also arises from off-balance sheet financial instruments such as loan commitments. Management and control of credit risk rest with the risk management team of the risk management department who reports on a regular basis to the bank's Board of Directors, senior management, and heads of business units.

a-1 Credit risk measurement

Loans and advances to banks and customers

In measuring credit risk of loans and advances to banks and customers, the bank considers the following three components:

- The probability of default (PD) which is the likelihood of failure by the customer or counterparty on discharging its contractual obligations over a specified year.
- Exposure at default (ED) which is the bank's current exposure to the counterparty and its likely future development when a loan defaults, and from which the bank derives the exposure at default.
- Loss given default (LGD) which is the share of an asset that is lost if a borrower defaults.

The bank assesses the probability of default by customer (individual assessment) using internal credit rating methodologies tailored to the various categories of counterparty. These methodologies have been developed internally and take into account statistical analysis combined with credit officers' judgment to determine the credit risk rating of the counterparty(ies), as appropriate. Customers of the bank are segmented into four classes of credit risk rating. The credit risk rating scale used by the bank, shown by the following table, reflects the extent of a probability of default occurring for each of the four-class credit risk rating grades. Basically, this means that exposures migrate between classes of credit risk rating on the basis of change in the assessment of the probability of default. The credit risk rating methodologies are reviewed and developed, as necessary. The bank assesses, on a regular basis, the performance of the credit risk rating methodologies and the extent to which they are capable of predicting default events.

Bank's internal ratings scale

Rating	Rating scale
1	Performing loans
2	Regular watch list
3	Special watch list
4	Non-performing loans

Exposure at default depends on the amounts which the bank expects to be outstanding upon the occurrence of a potential default event. For example, for a loan, the exposure at default is the nominal value of the loan. For commitments to provide loans, the bank includes amounts already withdrawn in addition to other amounts that are expected to have been withdrawn by the date on which a potential default event is expected to occur. Loss given default or loss severity represents the bank's expectation of the extent of loss upon claiming repayment should a default by the counterparty occur. This is expressed in terms of a loss percentage of debt which typically varies by type of counterparty, seniority of claim, and the extent to which collaterals or other credit enhancements are available.

Debt instruments, treasury and other bills

To manage credit risk for debt securities and other bills, the bank uses credit risk rating information supplied by independent external rating agencies such as Standard & Poor's ratings or their equivalents, where available. If such information is not available, the bank uses credit risk rating methods similar to those applied to its own credit customers. The investments in those securities and bills are regarded by the bank as a way to obtain a better credit quality and, at the same time, provide a readily available source to meet its funding requirements.

a-2 Risk limitation and mitigation policies

The bank manages, limits, and controls concentrations of credit risk wherever on the basis of individual counterparty (debtor), group of counterparties, industries, and countries.

The bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or groups of borrowers, as well as economic activities and geographical segments. Such risks are monitored on an ongoing basis and subject to annual (or more frequent) review, as necessary. Credit risk limits for individual borrower, group of borrowers, product, sector, and country are approved by the bank's Board of Directors on a quarterly basis.

The credit exposure to any borrower, including banks, is further divided into sub-limits covering on- and off-balance sheet exposures, and the daily risk limits in relation to the trading instruments such as forward foreign exchange contracts. Actual exposures against limits are monitored and compared daily.

Exposure to credit risk is also managed through regular analysis of the ability of potential borrowers to discharge their obligations and by changing the bank's lending limits, as appropriate.

Some specific limitation and mitigation measures are outlined below:

Collaterals

The bank employs a range of policies and controls to limit credit risk. Among these policies and controls is the taking of collaterals against funds advanced. The bank sets guidelines for specific classes of acceptable collaterals. The principal types of collateral for loans and advances are:

- Real-estate mortgage.
- Mortgage of business' assets such as inventory and equipment.
- Mortgage of financial instruments such as debt and equity securities.
- Ministry of Finance guarantees that reduce credit risk.

Long-term finance and corporate lending are often secured whereas advances to customers (retail lending) are generally unsecured. To minimize credit loss, the bank will seek additional collaterals from the counterparty(ies) as soon as impairment indicators are noticed for an individual loan or advance.

Collaterals held as security for assets other than loans and advances is determined by the nature of the instrument (asset). Debt securities and treasury bills are generally unsecured, with the exception of asset-backed securities, and similar instruments which are secured by portfolios of financial instruments.

- Credit-related commitments

The primary purpose of these credit-related commitments is to ensure that funds are available upon a customer's request. Financial guarantee contracts, such as standby letters of guarantee and credit, carry the same credit risk as loans. Documentary and commercial letters of credit – which are written undertakings by the bank on behalf of a customer authorizing a third party to draw drafts on the bank up to the extent of specified amounts and under pre-specified terms and conditions – are generally secured by the underlying shipments of goods to which they relate and, therefore, carry less credit risk than a direct loan.

Commitments to extend credit (loan commitments) represent unused portion of the authorized credit limit of loans, guarantees, or letters of credit. With respect to credit risk on commitments to extend credit, the bank is exposed to a potential loss in an amount equal to the total of unused commitments. However, the likely amount of loss in reality is less than the total amount of unused commitments, as most of these commitments are contingent obligations on customers with specific credit quality standards. The bank monitors the term to maturity of its loan commitments because longer-term commitments generally have some degree of credit risk higher than short-term commitments.

a-3 Impairment and provisioning policies

The internal assessment methodologies described in note (a-1) above focus, to a great extent, on credit-quality mapping from initial recognition of the lending and investment activities. Otherwise, allowances for expected credit losses at each reporting date, are recognized, for financial reporting purposes, based on objective evidence indicating that impairment has been incurred, as what shall be disclosed hereinafter.

Allowance for the impairment loss (loss provision) reported in the statement of financial position at year-end is derived from each of the four internal credit risk rating grades. Nonetheless, the majority of the impairment provision comes from the bottom two grades. The table below shows the proportionate share of the bank's onbalance sheet loans and advances for each of the bank's internal credit risk rating grades:

	<u>31/</u>	3/2022	<u>31/12/2021</u>		
Bank's internal rating	Loans and advances to customers	Provision for impairment loss	Loans and advances to customers	Provision for impairment loss	
	<u>%</u>	<u>%</u>	<u>%</u>	<u>%</u>	
 Performing loans Regular watch-list Special watch-list Non-performing loans 	68.21	11.23	66.59	10.00	
	27.06	18.24	27.06	15.57	
	0.72	7.16	2.51	9.93	
	4.01	63.37	3.84	64.50	
	100	100	100	100	

The internal credit risk rating methodologies assists management to determine whether an objective evidence of impairment exists, based on the following criteria set out by the bank:

- Significant financial difficulties of the borrower or debtor.
- A breach of contract terms, such as a default or delinquency in interest or principal payments.
- It is becoming probable that the borrower will enter bankruptcy, liquidation proceedings, or financial reorganization.
- Deterioration of the competitive position of the borrower.
- The bank (lender), for economic or legal reasons relating to the borrower's financial difficulty, granting to the borrower a concession that the lender would not otherwise consider.
- Impairment in the value of collaterals.
- Deterioration in the creditworthiness of the borrower.

The bank's policy requires review of individual financial assets that are above specific materiality threshold at least annually, or more frequently whenever changes in circumstances provide objective evidence that a financial asset has impaired. Provisions for expected credit losses are determined for individually assessed accounts by an evaluation of impairment loss, at reporting date, on a case-by-case basis, where such an assessment is applied to all accounts that are individually material. The assessment normally encompasses evaluation of the collateral held including re-confirmation of its enforceability and the anticipated receipts for each individual account.

Provisions are also recognized based on a collective assessment of groups of financial assets a group of financial assets with similar credit risk characteristics by using management experience with historical loss rates, professional judgment, and statistical techniques.

a-4 Measurement model for general banking risks

In addition to the four grades of the bank's internal credit risk rating indicated in note (a-1) above, management classifies loans and advances into more detailed sub-categories to comply with the Central Bank of Egypt requirements. Assets exposed to credit risk in these categories are classified in accordance with detailed rules and conditions which heavily depend on information relevant to the customer, its activity, its financial position, and its repayment track-record.

The bank calculates the provision required for impairment loss on assets exposed to credit risk, including loan commitments, on the basis of rates specified by the Central Bank of Egypt. In case, the provision required for impairment loss under the Central Bank of Egypt's credit worthiness rules exceeds the provision required, for the purpose of preparing the bank's financial statements in accordance with the Egyptian Accounting Standards, such excess shall be debited to retained earnings and accumulated in the general banking risks reserve in equity. This reserve is always adjusted, on a regular basis, by any increase or decrease so that the reserve shall always equal the amount of increase between the two provisions. Such reserve is not available for distribution, and note (30-a) shows the movement on the general banking risks reserve during the reporting year.

Following is a statement of credit risk categories as per the bank's internal credit ratings compared with those of the Central Bank of Egypt. This statement also includes the percentages of provisions required for impairment loss on assets exposed to credit risk:

<u>CBE</u> rating	Category description	Provision %	Bank's internal rating	Internal rating indication
1	Low risks	0	1	Performing debts
2	Moderate risks	%1	1	Performing debts

Syndicated loans	526,995,320	574,723,453
Other loans	3,716,300	2,198,277
Total Loans and advances	1,964,325,818	2,065,802,919
Financial investments : (Net)		
- Debt instruments	548,868,872	811,611,609
Other assets	70,454,947	81,259,636
Total	3,688,746,127	4,140,049,226
Off balance sheet items exposed to credit risk (Net)		
Letters of credit	122,660,079	1/12 1/16 // 20
Letters of guarantee	171,384,488	143,146,428 160,949,555
Total	294,044,567	304,095,983
	237,077,307	304,033,363

- The above table represents the bank's maximum exposure to credit risk as of March 31, 2022 and December 31, 2020, without taking account of any collaterals for the on-balance sheet items. Amounts shown above depend on the net carrying amounts reported in the bank's statement of financial position.
- As shown above, 53.25% of the bank's maximum exposure to credit risk results from loans and advances to banks and customers as of March 31, 2022 (December 31, 2021: 49.90%) whereas investments in debt instruments represent 14.88% as of March 31, 2022 (December 31, 2021: 19.60%).
- Management is confident in its ability to continue to control and sustain the bank's exposure to credit risk arising from both its loans and advances portfolio and debt securities at a minimum level based on the following:
- 95.27% of the bank's portfolio of loans and advances to customers is categorized in the top two grades of the bank's internal rating (December 31, 2021: 93.65%).
- 93.11% of the bank's portfolio of loans and advances to customers and banks neither has arrears nor impairment indicators (December 31, 2021: 93.90%).
- The bank has introduced a more stringent selection criteria for providing loans and advances during the current year ended December 31, 2021.
- More than 99.72% of the bank's investments in debt instruments and treasury bills represents financial obligations on the Egyptian Government as of March 31, 2022 (December 31, 2021: 99.63%).

The following table provides information on the quality of financial assets during the year:

b- Market Risk

The bank is exposed to market risk which is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk arises from open positions in interest rate, currency, and equity products, all of which are exposed to general and specific market movements and changes in the level of sensitivity to market rates or prices, such as interest rates, foreign exchange rates, and equity prices. The bank deals with its exposures to market risk separately as those arising either from trading or non-trading portfolios.

Management of market risks whether arising from trading or non-trading activities rests with the bank's risk management department. These market risks are monitored by two separate teams and information about them are reported on a regular basis to the bank's Board of Directors and to the heads of business units.

Trading portfolios include those positions arising from the bank's direct deals with customers or the market whereas the non-trading portfolios primarily arise from interest rate management of the bank's assets and liabilities relating to retail transactions. These non-trading portfolios include foreign exchange risks and equity risks arising from investments classified as at amortized cost and as at fair value through other comprehensive income.

b-1 Methods of measuring market risk

As part of managing market risk, the bank undertakes several hedging strategies including entering into interest rate swap contracts to hedge the risk associated with long-term fixed-rate debt instruments and loans if the fair value option is applied. The following are the most important measurement methods used by the bank to control market risk.

Value at Risk (VaR)

The bank applies the "value at risk" methodology to assess market risk and estimate the maximum limit of potential loss arising from the bank's outstanding positions in its held-for-trading and non-held-for-trading portfolios, based on a number of assumptions for various changes in market conditions. The bank's Board of Directors sets limits for the acceptable amount of the bank's exposure to market risk which may arise separately from trading and non-trading activities. These limits are monitored by the bank's risk management department on a daily basis.

The value at risk is a statistically defined probability-based approach used to estimate the amount of potential loss on the current portfolio resulting from adverse movements in market conditions. This VaR number reflects 98% probability (i.e., a confidence level) that the bank's acceptable loss will not exceed the reported VaR, with 2 percent probability that actual loss may exceed this expected value at risk. The value at risk model estimates the potential loss in pre-taxation profit over a given holding year (ten days) before open positions can be closed. It is also assumed that market movements during that holding year would follow the same pattern of movement that occurred during the preceding 10 days. The bank estimates the previous pattern of movement in market conditions based on the bank's historical data for the preceding five years. The bank then applies such historical changes in rates, prices, and indicators directly to current positions — a method known as historical simulation. Actual outputs are monitored on a regular basis to measure the validity of assumptions and factors used to calculate the value at risk.

The use of such a method does not prevent actual loss from exceeding those limits in the event of larger market movements.

Since the value at risk is an essential part of the bank's system for controlling market risk, the Board of Directors sets limits on the value at risk for both trading and non-trading operations on an annual basis, and allocates them on business units. Actual values at risk are compared to those established limits, by the bank's risk management department which performs its review on a daily basis.

The quality of the value at risk model is continuously monitored through enhanced tests of the value at risk results of the trading portfolio, and the results of these tests are reported to the bank's top management and Board of Directors.

Stress tests

Stress tests indicate the magnitude of the potential loss that may arise from severely adverse conditions. Stress tests are designed in line with the business activities, and include a standard set of scenarios that the bank might experience.

Stress tests carried out by the bank's risk management department include testing the stress of changes in risk factors, where a range of sharp movements is applied to each risk category. These tests also include stress tests for developing markets that are subject to sharp movements, and special stress tests which include potential events affecting certain centers and regions, such as what may result in a region due to liberalization of restrictions on one currency. The bank's senior management and Board of Directors review the stress tests' results.

b-2 Summary of Value at Risk (VaR)

Total value at risk per risk type						(USD)
	Three mont	ths ended at 3	1/3/2022	The yea	ar ended 31/12	2/2021
	Average	Higher	Lower	Average	Higher	Lower
Foreign exchange rate risk	10,372	16,830	3,410	27,528	99,471	1,291
Total VaR	10,372	16.830	3,410	27.528	99,471	1.291

Total value at risk of the held-for-trading portfolio per risk type

	Three mont	hs ended at 3	1/3/2022	The year ended 31/12/2021		
	Average	Higher	Lower	Average	Higher	Lower
Foreign exchange rate risk	10,372_	16,830	3,410	27,528	99,471	1,291
Total VaR	10,372	16,830	3,410	27,528	99,471	1,291

b-3 Foreign exchange rate volatility risk

The bank is exposed to the risk of fluctuations in exchange rates of foreign currencies and their effects on its financial position and cash flows. The bank's Board of Directors uses preset limits for foreign currencies on the basis of the aggregate value of the overnight and intra-day positions both of which are monitored on a daily basis. The following table summarizes the extent of the bank's exposure to the risk of fluctuations in foreign currencies exchange rates at end of the reporting period / year. The tables Includes the carrying amounts of the bank's financial instruments categorized by the currencies in which the instruments are denominated.

b-4 Interest rate risk

The bank is exposed to interest rate risk resulting from fluctuations in market interest rates. Interest rate risk includes cash flow risk which is the risk that future cash flows of a financial instrument will fluctuate due to changes in the interest rate of that instrument, and fair value risk which is the risk that the fair value of a financial instrument will fluctuate as a result of changes in the market rates of return. The bank's Board of Directors uses preset limits for the level of variation in interest repricing to which the bank can hold, which are monitored by the bank's risk management department on a daily basis.

The following table summarizes the extent of the bank's exposure to the risk of fluctuations in interest rate, and includes the carrying amount of financial instruments distributed on the basis of interest repricing date or instruments maturity date, whichever is earlier.

- ** The non-interest bearing category of loans and advances to customers reports an amount of USD 115,247,562 of which USD 673,740 represents unearned interest for discounted bills, USD 83,374,658 representing a provision for impairment loss, USD 2,219,933 representing segregated interest, and USD 28,979,230 representing interest in advance as of December 31, 2021 (Note 17).

c- Liquidity Risk

Liquidity risk is the risk that the bank will have difficulties in fulfilling its obligations associated with its financial liabilities at maturity and replacing the amounts withdrawn, which can result in the bank's failure to repay its customers' deposits and fulfil its loan commitments.

Liquidity risk management

The bank's assets and liabilities committee (ALCO) applies control processes which include:

- Day-to-day finance is managed by monitoring future cash flows to ensure that all obligations can be met. This includes replacing funds when they are due or when they are lent to customers. The bank is present in the international financial markets to ensure achievement of that objective.
- Maintaining a portfolio of highly marketable assets that can be easily liquidated to offset any unexpected cash flow disruptions.
- Monitoring liquidity ratios in comparison to the bank's internal requirements and those of the Central Bank of Egypt.
- Managing concentration of credit risk and identifying loans maturities.

For the purposes of monitoring and reporting, cash flows are measured and projected for the following day, week, and month, which are the principle years for the management of liquidity. The starting point for these projections is an analysis of the contractual maturities of financial liabilities and the dates of expected collections from financial assets.

The assets and liabilities committee also monitors the mismatch between the medium-term assets and the level and type of unused portion of loan commitments, the extent to which overdrafts (debit current accounts) are used, and the impact of the contingent liabilities such as the letters of guarantee and letters of credit.

Funding approach

Sources of liquidity are regularly reviewed by a separate team in the bank's assets and liabilities committee to maintain a wide diversification of currencies, geographical areas, sources, products, and maturities.

d- Operational risk

The definition of operational risks includes the risk of direct and/or indirect loss resulting from inadequacy or deficiency in operations or systems, human resources, or external events, as well as, legal risks and any operational events that adversely affect the bank's reputation, the continuity of business, and/or the market value of the bank.

Operational risk management framework

operational risk management is an essential part of supporting the bank's various activities, in terms of its role in identifying and evaluating the associated risks and controls necessary to prevent those risks, to limit operational losses, and to contribute to supporting the efficiency and effectiveness of use of the bank's various resources.

The operational risk management policy aims to establish a general framework to enhance management effectiveness and support corporate governance through increasing awareness and disseminating the culture of risks among all employees, defining the objectives of operational risk management, demonstrating how to classify risks and differences between operational risks and other types of risk. This policy also aims to determining all management and supervisory responsibilities in addition to the tools and methodologies used within the bank to identify, measure, report, and follow-up in order to limit operational risks.

The focus of operational risk management is on spreading a culture of risk and raising awareness of the importance of risk identification, reviewing and examining policies, procedures, and processes, checking and supporting systems and their security methods, and on the effectiveness of control procedures to limit operational risks.

The proactive management of operational risks in collaboration with all concerned departments aims to identify early warning indicators of events that may expose the bank to any potential risks.

Operational risk management has begun to build and classify database for operational events in line with Basel II directives where the data collection process is based on internal operational events' reports as well as all relevant external events. This data is used to analyze and monitor root causes, frequency of events, and evaluate corrective actions and control procedures designed to limit operational risks.

e- Fair value of financial assets and liabilities

- The bank determines the fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants on the measurement date taking into account, when making such measurement of fair value, the characteristics of the asset or the liability if market participants would take these characteristics into account when pricing the asset or liability at the measurement date. These characteristics include the condition and location of the asset and restrictions, if any, on the sale or use of the asset based on how market participants look at those assets.
- The bank uses the market approach to determine the fair value of financial assets and financial liabilities as this approach uses prices and other relevant information resulting from market transactions involving assets, liabilities, or a group of identical or comparable assets and liabilities. The bank may, therefore, use market-based valuation techniques such as market multipliers derived from comparable groups. Selecting the appropriate multiplier within a range would then require the use of personal judgement, taking into account the quantitative and qualitative factors underlying the measurement.
- When the market-based approach is not reliable to determine the fair value of a financial asset or financial liability, the bank uses the income-based approach to determine fair value, under which future amounts such as cash flows, or income and expense items are converted into a net present value (discounted) so that fair value measurement reflects the current market assessments about future amounts.
- if it is assessed that neither the market approach nor the income approach is reliable to determine the fair value of a financial asset or financial liability, the bank uses the cost-based approach to determine fair value so as to reflect the amount that would be required currently to replace the service capacity of an asset (often referred to as current replacement cost). The fair value under this approach reflects the cost to a market participant buyer to acquire or construct a substitute asset of comparable utility, adjusted for obsolescence because the market participant, as a buyer, will not actually pay in acquiring the asset more than the amount at which the asset's benefit can be replaced.

The valuation methods used to determine the fair value of the financial instrument include :

- Quoted prices for identical assets or liabilities in active markets.
- For interest rate swap contracts by calculating the net present value of the expected future cash flows based on observable yield curves.
- For foreign currency futures contracts, by calculating the net present value of the expected cash flows using the forward exchange rate of the contracted currency.
- Analysis of discounted cash flows in determining the fair value of other financial instruments.

The following table summarizes the carrying amounts and fair values of the financial assets and financial liabilities that are not stated or presented at fair value in the bank's statement of financial position:

	March 31, 2022		December 31, 2021		
	Carrying amount	Carrying amount Fair value		·

Loans and advances to customers

These loans and advances are stated in the statement of financial position at net amount after deducting the provision for impairment loss.

Debt Instruments classified as at amortized cost

The fair value of debt instruments classified as at amortized cost "Egyptian Treasury Bonds" is based on the latest prices announced by the Central Bank of Egypt at the end of the reporting year.

Customers' deposits and due to other banks

The estimated fair value for deposits with indefinite maturities, including non-interest bearing deposits, represents the amount that is repayable on demand.

f- Capital management

For capital management purposes, the bank's capital includes total equity as reported in its statement of financial position plus some other non-equity elements that are managed as capital. The bank manages its capital to ensure that the following objectives are achieved:

- Compliance with capital legal requirements in Egypt.
- Protecting the bank's ability to continue as a going concern so that it can continue to provide returns for shareholders and other parties dealing with the bank.
- Maintaining a strong capital base to enhance business growth.
- Capital adequacy and uses of capital are reviewed by the bank's management in accordance with the regulator's requirements (Central Bank of Egypt) through models that are based on guidelines developed by the Basel Committee. The required data is submitted to and filed with the Central Bank of Egypt on a quarterly basis.

The Central Bank of Egypt requires each bank to comply with the following:

- Maintaining issued and paid-in capital at a minimum level of EGP 500 million.
- Maintaining a minimum level of capital adequacy ratio of 12.5% calculated as the ratio between the total value of capital elements, and the risk weighted average of the bank's assets and contingent liabilities (weighted by credit, market and operating risks) and taking into consideration the conservation pillar starting from 2019 in accordance with the Basel II requirements.

The numerator in the capital adequacy ratio comprises the following 2 tiers according to Basel II:

<u>Tier 1:</u> is core capital which comprises issued and paid-up common stock (after deducting the carrying amount of treasury stock), retained earnings, and reserves set aside from profit distributions in accordance with the provisions of the governing law and the bank's articles of incorporation (except for the reserve of general banking risks and the special reserve), less any goodwill previously recognized and any accumulated losses.

<u>Tier 2:</u> is supplementary capital which comprises an amount equal to the provision for impairment loss of loans and advances and contingent liabilities not exceeding 1.25% of the total value of credit risk of assets and contingent liabilities as adjusted by the weighted average of their related risks, plus subordinated loans/deposit with maturities over 5 years (the carrying amount of which shall be reduced on an annual basis by 20% in each year of the last five years remaining to their maturities), plus 45% of the increase in fair value above the carrying amount of investments classified as at fair value through other comprehensive income, investments classified as at amortized cost, and investments in associates, plus 45% from the amount of the special reserve.

The following are complied with when calculating the numerator of the capital adequacy ratio: total value of tier 2 capital not to exceed total value of tier 1 capital, and total value of subordinated loans (deposits) not to exceed 50% of tier 1 capital.

Assets are weighted by risk factors ranging from 0 to 150% classified on the basis of the nature of the debtor in each asset in a way which reflects the credit risks associated with each debtor (after consideration of any cash collaterals). The same treatment is applied on off-balance sheet items after making the necessary adjustments to reflect the contingent nature of and potential loss from those amounts.

The capital adequacy ratio has been prepared in accordance with the Basel II requirements based on the Central Bank of Egypt Board of Directors' decision in its meeting held on December 18, 2012, and that was issued on December 24, 2012.

In light of the repercussions of the new Coronavirus crisis and the ensuing precautionary measures taken by the Central Bank of Egypt to mitigate the financial and economic repercussions of this crisis, to ease its burden on banks, and to enable them to use some of the financial pillars that have already been set up to meet concentration of credit risk arising from credit portfolios, the Central Bank of Egypt Board of Directors decided in its meeting held on April 12, 2020 to "exempt banks for one year, starting from the date of the CBE decision, from application of the clause which sets limits on concentration of credit risk arising from the banks' credit portfolios for the largest 50 clients and their related parties."

Additionally, with the aim of continuing to back-up banks to play their role in supporting the various economic sectors, the Board of Directors of the Central Bank of Egypt in its meeting held on March 28, 2021 decided to "extend the exemption for banks from applying the second item of the previous Central Bank of Egypt directive taken by its Board of Directors as issued by a circular dated January 11, 2016 regarding the limits of concentration of credit risk arising from the banks credit portfolios for the largest 50 customers and their related parties until the end of December 2021".

The following is the capital adequacy ratio as reported to the Central Bank of Egypt:

Capital adequacy ratio

Société Arabe Internationale De Banque (S.A.E.) Financial Statements for the period ended March 31, 2022 Translation of financial statements originally issued in Arabic

Leverage ratio

The Board of Directors of the Central Bank of Egypt approved in its meeting held on July 7, 2015 the supervisory instructions related to the leverage ratio which require banks to maintain a minimum level of leverage ratio of 3% on a quarterly basis as follow:

- Guiding ratio starting from the end of September 2015 until 2017.
- Mandatory supervisory ratio starting from 2018.

This ratio was introduced as a prelude to assess the extent to which it is reliable for inclusion in tier 1 of Basel requirements (minimum level of capital adequacy ratio) with the objective of maintaining the strength and healthiness of the Egyptian banking system, and to keep up with best international regulatory practices in this regard.

The leverage ratio reflects the relationship between tier 1 capital that is used in calculating the capital adequacy ratio (after exclusions) and the bank's assets (both on- and off-balance sheet) that are not risk weighted.

Ratio elements:

a- The numerator elements

The numerator of this ratio consists of tier 1 capital (after exclusions) that are used in the numerator of the capital adequacy ratio currently applied in accordance with the requirements of the Central Bank of Egypt.

b- The denominator elements

The dominator of this ratio consists of all assets of the bank (on- and off-balance sheet) based the bank's financial statements, the total of which is described as "the bank's exposures" including the following group:

- 1- The bank's exposures from on-balance sheet items after deducting some of Tier 1's exclusions of the capital base.
- 2- The bank's exposures from derivative contracts.
- 3- The bank's exposures from funding financial securities transactions.
- 4- The bank's exposures from off-balance sheet items (weighted by credit conversion factors).

The following is the leverage ratio as reported to the Central Bank of Egypt:

	31/3/2022	31/12/2021
Leverage ratio	7.82%	7.15%

4- Critical accounting judgments and estimates

The bank makes estimates and assumptions about the carrying amounts of assets and liabilities which will be presented within the next financial reporting year. Estimates and assumptions are continually evaluated and adjusted based on management historical experience and other factors, including expectations about future events that are considered reasonable under the pertinent circumstances and in the light of information that is available to the bank.

a- Impairment losses on loans and advances

At a minimum—at the end of each quarter, the bank reviews its loan portfolio to assess whether these assets have suffered an impairment. In assessing whether an impairment loss should be recognized in the income statement, management uses its judgments to identify whether there is any reliable evidence indicating measurable decline in the expected future cash flows from the loan portfolio before identifying any decline for each individual loan. This evidence may include observable data indicating that there has been adverse changes in the payment status of a group of borrowers in the bank, or national economic conditions that correlate with defaults on the bank's assets. When rescheduling future cash flows of a portfolio of loans, management uses estimates based on historical loss experience for assets with credit risk characteristics and objective evidence of impairment loss similar to those in the portfolio. The methodology and assumptions used for estimating both the amount and timing of future cash flows are reviewed regularly to reduce any differences between loss estimates and actual loss experience.

b- Financial investments at amortized cost

Non-derivative financial assets with fixed or determinable payments and maturities are classified as financial assets as at amortized cost, a classification that requires the use of personal judgment to a great extent. To make this decision, the bank evaluates its intention and ability to hold those financial investments. If the bank fails to keep those investments until the maturity date except in certain special circumstances such as the sale of an insignificant amount near the maturity date then all financial investments at amortized cost are reclassified to financial investments at fair value through other comprehensive income, therefore these investments will be measured at fair value and not by amortized cost in addition to the suspension of classifying any investments in that item.

If the classification of investments as amortized cost were suspended, the carrying amount of the outstanding amortized cost investments will be increased by USD 463,810 to reach the fair value with a corresponding increase in the fair value reserve within the equity.

c- Income tax

The bank's profits are subject to income taxes which require the use of critical estimates to determine the income tax expense (or income). Since the income tax effect of some transactions are difficult to assess with certainty, the bank recognizes the related tax liability based on its expectation of the likelihood of an additional tax arising during tax inspection. When the amount of final income taxes differ from amounts previously recognized by the bank, such difference affects the income tax and the current and deferred tax liability in the year during which the difference is determined.

5- Segmental analysis (reportable segments)

a-Segmental analysis by activities

Segment activity includes operations processes, assets used in providing banking services, and management of surrounding risks and income associated with this activity which may all differ from the other activities. The segmental analysis of activities in accordance with the banking operations include the following:

Large, medium and small size enterprises

Activities include current accounts, deposits, debit current accounts (overdrafts), loans and advances, and financial derivatives.

Investing

Activities include company mergers, acquisition of investments, and financing restructuring and reorganization of companies and financial instruments.

<u>Retail</u>

Activities include current and savings accounts, deposits, credit cards, personal loans, and Mortgage loans.

Other activities

Include other banking services such as management of funds.

Inter-segment transactions are effected within the normal operating cycle of the bank's business. The assets and liabilities include operating assets and liabilities as reported in the bank's statement of financial position.

- * Based on the approval of our bank's Board of Directors in its meeting held on September 25, 2016, a subordinated loan contract was concluded with the Arab International Bank (the major shareholder of our bank) in a total amount of USD 50,000,000 and, on February 26, 2017, the ordinary general assembly of our bank ratified the conclusion of the subordinated loan contract in order to support the second tier of our capital base within the context of calculating our bank's capital adequacy ratio in accordance with the Basel's requirements aiming to maintain the prescribed ratio set out by the Central Bank of Egypt.
- The term of this subordinated loan is five years starting November 2, 2016 and ending November 1, 2021. This loan is repayable in one shot at the end of the year (a balloon payment) by November 1, 2021. Alternatively, our bank has the option to repay this loan in equal annual installments, where the amount of each installment shall not exceed 20% of the value the loan. Interest is payable on this loan every six months and is calculated on the loan amount at an annual rate of 4% (four percent) above the 6-month LIBOR.
- On December 26, 2019, a supplement to the aforementioned subordinated loan contract was signed, according to which, the contract term was extended for a year of five years starting November 1, 2019 and ending November 1, 2024, by which date, the loan amount would be fully paid. Interest payable on the loan amount remains at an annual rate of 4 % (four percent) above the 6-month LIBOR. Any other conditions for the aforementioned subordinated loan contract remains unchanged.
- On June 9, 2021, the amortized portion of USD 10 million was paid off from the subordinated loan given to our bank from Arab International Bank on November 1, 2016 with a total amount of USD 50,000,000 for 5 years which was extended starting from November 2019 for 5 years ending on November 1, 2024 according to the renewal supplement to the aforementioned subordinated loan contract on December 26, 2019.
- On November 10, 2021, the amortized portion of USD 10 million (Ten million united states dollar) was paid off from the second subordinated loan given to our bank from Arab International Bank (Main investor).
- ** On March 14, 2022, a one-year bilateral loan contract was concluded with the Bank of UBAE Italy with the amount of USD 16 million, with the loan to be repaid at the end of 12 months from the grant date (March 17, 2022) The amount of the loan will be calculated at a rate of return of 1.5% annually above the Libor rate for three months and will be payable at the end of every three months.

29- Issued and paid up capital

	No. of Shares	Nominal value per share	<u>Total</u>
Balance at 1/1/2022	<u>(millions)</u>	USD	<u>USD</u>
Balance at 31/3/2022	15	10	150,000,000
	15	10	150,000,000

⁻ A provision with the full estimated amount has been recognized, and it's expected to fully utilize the recognized provision during subsequent periods.

- The authorized capital is USD 200,000,000 at a par value of USD 10 per share. The issued, subscribed in, and fully paid up capital is USD 150,000,000 divided into 15,000,000 shares at a par value of USD 10 each.
- On March 19, 2020, the bank's General Assembly decided to approve the bank's financial statements for the year ended December 31, 2019 and authorizing the increase of the issued and paid up capital with the amount of USD 7,500,000 through stock dividends to the bank's shareholders, where these shares are divided into a number of 750,000 shares, representing 5% of the issued and paid up capital and distributed to the shareholders each as much as their share in the paid up capital equivalent to 1 free share for each 20 shares.
- On December 8, 2020, the General Authority for Investment and Free Zones (GAFI) approved the increase of issued and paid up capital by USD 7,500,000 as stock dividends contingent on the Central Bank of Egypt's approval of that increase. On November 18, 2021 the Central Bank of Egypt issued its approval for the capital increase.
- On April 11, 2022, the extraordinary General Assembly of the Bank's shareholders approved the following:
- 1- Increase authorized capital from USD 200,000,000 to USD 350,000,000.
- 2- Increase in issued and paid up capital from USD 150,000,000 (Only one hundered and fifty million United States dollars) to USD 157,500,000 (only one hundered fifty seven million and five hundered thousand United States dollars) As approved by the Central Bank of Egypt and through stock dividends approved by the General Assembly held on March 19, 2020 through the approval of the list of dividends for the financial year ended December 31, 2019.
- Untill the completion of the procedures for recording this increase, it has been recognized as "suspended under capital increase" under the equity item.

30- Reserves and retained earnings

<u>Reserves</u>	<u>31/3/2022</u> <u>USD</u>	31/12/2021 <u>USD</u>
General banking risk reserve (a) Legal reserve (b)	332,197	332,197

d- Special reserve

The application of the Central Bank of Egypt (CBE) rules for preparation and presentation of financial statements as well as the modified principles of recognition and measurement all of which were approved by the CBE Board of Directors in its meeting held on 16 December 2008, requires the bank to restate the comparative figures of some, but not all, of the financial statements elements in the first financial year that have been impacted by this change, including (comparative figures) in the statement of financial position and those of the income statement for the (preceding year). As the adjustments resulted in a net positive impact, such impact had been recognized directly in retained earnings then transferred to the special reserve in equity. The bank is precluded from using this special reserve, until approval is received from the CBE.

h- Retained earnings

	<u>31/3/2022</u> USD	<u>31/12/2021</u> USD

36- Important Events

- 1- The impact of COVID-19 continued across all geographical regions of the world, causing continued disruption of commercial and economic activities, albeit to a lesser extent, as vaccines have been reaches and citizens are starting to be vaccinated in many countries, including Egypt. However, the continued spread of COVID-19 and the emergence of variants have led to continued uncertainty in the global economic environment. The Bank is closely following the situation through the business continuity plan and other risk management practices related to possible business disruptions as a result of the COVID-19 outbreak and its impact on banking operations and financial performance.
 - As a result of the uncertainty resulting from the COVID-19 outbreak and in light of the country's actions regarding cohabitation procedures, the bank closely monitors the loan portfolio to see the impact of the virus on different quantitative and qualitative factors to identify significant increases in credit risks for the entire portfolio in its various economic sectors. Accordingly, the bank continues to take proactive measures initiated from the first quarter of 2020 by strengthening the allocations needed to mitigate the impact of COVID-19 on the loan portfolio with the possibility of taking further precautionary measures in light of the fact that the pandemic has not yet ended.
- 2- On September 15, 2020, the Central Bank of Egypt and the Banking Sector issued law no. 194 of 2020, which repealed law no. 88 of 2003 of the "Central Bank, Banking Sector and Monetary System", the law applies for the Central Bank of Egypt and the Egyptian banking system, the addressees are obliged to reconcile their situation in accordance with its provisions within a year not exceeding one year from the date of its implementation, and the Board of Directors of the Central Bank may extend this year for a year or for other years not exceeding two years, The Central Bank have to issue regulations and decisions implementing the law.

In light of the progress in reconciling the positions of Société Arabe Internationale De Banque with regard to the minimum requirements of the issued and paid up capital, the Bank's Board of Directors decided to pass on February 8, 2022 to adopt the disclosure report form for the purpose of amending in accordance with article 48 of the registration rules on the conduct of the procedures for increasing the issued and authorized capital in relation to:

- a- Increasing the authorized capital proposed by the Bank's Board of Directors and approved by the Central Bank of Egypt to USD 350,000,000 instead of USD 200,000,000.
- b- Increase the issued capital by USD 7,500,000 through stock dividends approved by the General Assembly held on March 19, 2020 by adopting the list of dividends for the fiscal year ended December 31, 2019, so that these shares are distributed over the number of 750,000 shares and represent 5% of the paid-up capital and distributed to the shareholders in accordance to their share in the capital, distributed as one share for every 20 shares.
- On April 11, 2022, the extraordinary General Assembly of the Bank's shareholders approved these
 amendments and all legal and administrative measures are being taken with the competent authorities to
 amend the statute and increase the authorized and issued capital.
